Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

XX Detecting Mycobacterium species, involves in vitro amplification of 16S
XX rRNA or DNA encoding RNA in nucleic acid amplification mixture using
XX specific primers, and detecting the amplified nucleic acid.
XX
XX Claim 1; Page 36; 44pp; English.
XX
XX The invention relates to a method of detecting Mycobacterium species,
XX that involves amplifying Mycobacterium 16S ribosomal RNA (rRNA) or DNA
XX encoding 16S rRNA in an in vitro nucleic acid amplification mixture
XX comprising a polymerase, and at least two primers, and then detecting the
XX amplified nucleic acid. The method is relatively simple and useful for
XX detecting the presence of various Mycobacterium species in a biological
XX sample, and thus important for diagnosis of infections resulting from
XX them. The method is especially important for screening opportunistic
XX infections caused by M. tuberculosis or a Mycobacterium other than
XX tuberculosis (MOTT). The present sequence is a PCR primer used for
XX amplifying Mycobacterium 16S rRNA

XX  
PS Disclosure; Page 50-51; 67pp; Japanese.  
XX  
XX The present invention describes a DNA sequence which contains a base  
CC sequence from bases 544-1758 in the sequence of (1) with 1992 base pairs,  
CC or a DNA hybridisable with the DNA under stringent conditions and  
CC encoding a polypeptide with hydroxylase activity on compactin at 6beta-  
CC position. Also described: (1) DNA containing base sequences from bases  
CC 544-1758 and from bases 1782-1970 in the sequence of (1) or a DNA  
CC hybridisable with the DNA under stringent conditions and encoding a  
CC polypeptide with hydroxylase activity on compactin at the 6beta-position;  
CC (2) a polypeptide encoded by any of the DNA or containing an amino acid  
CC sequence based on the polypeptide but with some amino acids deleted,  
CC substituted or added and having hydroxylase activity on compactin at the  
CC 6beta-position; (3) a recombinant DNA obtained by integrating with any of  
CC the DNA; (4) a microorganism transferred with the recombinant DNA; (5) a  
CC process for producing pravastatin by culturing the transformant  
CC microorganism before isolating the culture liquor or cells, and addition  
CC of compactin for reaction to give pravastatin for recovery; and (6)  
CC Streptomyces sp. TM-6 (FERM BP-8002) or TM-7 (FERM BP-8003). (1) has  
CC antilipaeamic activity. The polypeptide and its encoded DNA are applicable  
CC in constructing transformant microorganisms to synthesise pravastatin for  
CC treating hyperlipidaemia. With the recombinant microorganisms,  
CC pravastatin can be produced efficiently, with much less galpha  
CC hydroxylated epimer formed. The present sequence represents a  
CC Microtrasporea recticatena IF014525 nucleotide sequence, which is given  
CC in the exemplification of the present invention

XX Novel cyclic hydrocarbon degrading Rhodococcus species GR-002 strain
PT having biochemical properties e.g. gram positive bacillus, catalase test
PT positive, pyrazinamidase negative, useful for degrading waste engine oil.
XX Claim 2; SEQ ID NO 1; 13pp; Japanese.
XX The invention relates to a novel cyclic hydrocarbon degrading agent from
XX the Rhodococcus genus. The cyclic hydrocarbon degrading agent having
CC biochemical properties such as: gram positive bacillus, catalase test
CC positive, nitrate-reduction ability positive, pyrazinamidase negative,
CC pyrrolidonyl allyl amidase negative, alkali phosphatase positive, beta-
CC glucuronidase negative, beta-galactosidase negative, alpha-glucosidase
CC positive, N-acetyl-beta-glucosaminidase negative, urease positive. The
CC novel Rhodococcus microorganism is Rhodococcus sp. GR-002 strain having
CC the accession number FERM P-18804. The cyclic hydrocarbon degrading agent
CC is useful for processing a cyclic hydrocarbon-containing substance, such
CC as a waste engine oil. The novel Rhodococcus microorganism is useful for
CC degrading cyclic hydrocarbons containing aromatic hydrocarbons,
CC cycloaliphatic hydrocarbons, and/or polycyclic aromatic hydrocarbons.
CC This polynucleotide represents the novel Rhodococcus microorganism 16S
CC rDNA sequence of the invention.

XX Improving plant productivity comprises introducing into the plant or
PT propagation material an endophytic actinomycete that facilitates

```

```

PT induction of at least one characteristic related to improved
XX productivity.
PS Claim 1; SEQ ID NO 16; 235pp; English.
XX
CC This invention relates to a novel method for improving plant
CC productivity. Specifically, it refers to introducing into the plant or
CC propagation material an endophytic actinomycetes or variant thereof,
CC where the actinomycetes facilitate induction of a characteristic related
CC to improved productivity. The present invention further describes
CC metabolites of the actinomycetes microorganism such as auxin, gibberellin
CC or cytokinin that are able to induce disease resistance in plants i.e.
CC provide disease bio-control capabilities against pathogen infection.
CC Accordingly, the method facilitates the improvement of cereal crop
CC productivity including increasing germination by up-regulating plant
CC growth promoting activities, as well as improving plant vigor or flower
CC and fruit yield. Furthermore, the new actinomycete or metabolite is
CC useful in the manufacture of a medicament for the therapeutic and/or
CC prophylactic treatment of a mammalian or non-mammalian subject i.e.
CC plant. As such, this method provides plant protectants and plant growth
CC stimulants that exhibit antibacterial, antimicrobial, fungicide,
CC insecticide and nematocide activities. This polynucleotide is the DNA
CC sequence of an actinomycetes 16S ribosomal RNA sequence of the invention.

XX
XX New abyssomicin polycyclic macrolactone compounds, useful as antibiotics
XX and antiprotozoal agents effective against multiresistant strains,
XX prepared using bacteria of genus Verrucosisspora.
XX
XX Disclosure; SEQ ID NO 1; 47pp; German.
XX
XX This invention describes novel polycyclic macrolactones and their
XX derivatives , prepared using bacteria of genus Verrucosisspora and
XX designated abyssomicins. The polycyclic macrolactones have at least one
XX oxa-bicyclo system as a partial structure and at least one Michael system
XX as double bond system. The polycyclic macrolactones are prepared by
XX culturing Verrucosisspora strain AB 18-032, recovering a culture
XX supernatant from the culture, optionally preparing a culture filtrate and
XX optionally isolating one or more polycyclic macrolactones from the
XX supernatant and/or filtrate. Alternatively the microorganism is cultured
XX followed by isolating one or more polycyclic macrolactones from the
XX microorganism. The Verrucosisspora strain AB 18-032 was isolated from
XX marine sediment collected at a depth of 1000m in Sagami bay in the
XX Japanese sea and is deposited as DSM No. 15899. The polycyclic
XX macrolactones inhibit the biosynthesis of p-Aminobenzoic acid, (an
XX essential component in the biosynthesis of folic acid) from chorismic
XX acid, thus inhibiting folic acid biosynthesis. The vitamin folic acid is
XX essential to the life of microorganisms, especially prokaryotes and
XX protozoa. The polycyclic macrolactones do not inhibit the biosynthesis of
XX folic acid in mammals (including humans), and thus have no adverse
XX effects on mammalian cells. Three polycyclic macrolactones are
XX specifically claimed, i.e. abyssomicin B, abyssomicin C and abyssomicin

```

```

CC D. Abyssomicin C strongly inhibited growth of methicillin-resistant
CC Staphylococcus aureus strain N315 and vancomycin-resistant Staphylococcus
CC aureus strain Mu50. The products of the invention are useful as
CC antibiotics (especially effective against Gram positive bacteria) and
CC antiprotozoal agents, specifically effective against bacteria and
CC protozoa resistant (especially multi-resistant) to conventional
CC antibiotics. Typically polycyclic macrolactones are useful for combating
CC tropical protozoal diseases (e.g. malaria, leishmaniasis, sleeping
CC sickness and Chagas disease) and infections caused by resistant Gram
CC positive bacteria such as methicillin- and vancomycin-resistant
CC Staphylococcus aureus strains. Polycyclic macrolactones are also useful
CC as disinfectants (especially in hospitals and other medical
CC establishments) and as lead structures for the development of further
CC active agents. This sequence represents the Verrucosisspora strain AB 18-
CC 032 16S rRNA DNA which is used to phylogenically classify the bacterial
CC strain.

DR	Determining a bacterium species comprises providing oligonucleotide		
PT	primer set comprising SEQ-FOR and SEQ-REV in a complementary fashion.		
XX	Disclosure; SEQ ID NO 7; 74pp; English.		
XX			
CC	The invention relates to a method (M1) for determining a bacterium		
CC	species. (M1) comprises: (a) culturing a bacterium from a specimen; (b)		
CC	extracting a genomic nucleotide from the bacterium to provide a		
CC	nucleotide template; (c) annealing a region of a nucleotide template to a		
CC	specific oligonucleotide primer set comprising SEQ-FOR and SEQ-REV in a		
CC	complementary fashion, the primer set designed to provide a product		
CC	having a predetermined size dictated by a complementary primer set; (d)		
CC	amplifying the region of the nucleotide template to produce the product;		
CC	and (e) determining a species of a bacterium in a nucleotide sequence of		
CC	the product. Also described is an alternative method (M2) for determining		
CC	a bacterium species comprising: (a) providing a specimen or a sample		
CC	having a template; (b) providing a pair of primers selected from: (i) a		
CC	first forward primer having consecutive bases of an APB-f comprising any		
CC	of the 36 sequences of 15-22 bp (AEA22417-AEA22452), or their fragments		
CC	or variations and a first reverse primer having consecutive bases of an		
CC	APB-r comprising any of the 36 sequences of 15-22 bp (AEA22453-AEA22488)		
CC	or their fragments or variations, (ii) a second forward primer having		
CC	consecutive bases of an UB-f comprising any of the 28 sequences of 15-21		
CC	bp (AEA22489-AEA22516) or their fragments or variations and a second		
CC	reverse primer having consecutive bases of an UB-r comprising any of the		
CC	28 sequences of 15-21 bp (AEA22517-AEA22544) or their fragments or		
CC	variations, or (iii) a first forward primer having consecutive bases of		
CC	an APB-f of AEA22417-AEA22452 or their fragments or variations and a		
CC	second reverse primer having consecutive bases of an UB-r of AEA22517-		
CC	AEA22544 or their fragments or variations; (c) the specimen; and (d)		
CC	comparing the product from the specimen with a nucleotide sequence from a		
CC	database to determine the bacterium species present in the specimen. The		
CC	methods are useful for determining a bacterium species. The present		
CC	invention represents a Mycobacterium gordonae 16S rRNA nucleotide		
CC	sequence, which is used in the exemplification of the present invention.

 DR Novel Rhodococcus erythropolis M-13 strain capable of degrading aliphatic  
 PT hydrocarbon, useful for bioremediation of oil-polluted environment such  
 PT as river water, underground water, ocean, sea cost.  
 PS Claim 1; SEQ ID NO 1; 14pp; Japanese.  
 XX The invention relates to a novel Rhodococcus erythropolis M-13 strain  
 CC capable of degrading aliphatic hydrocarbons. The invention further  
 CC provides the 16S rRNA gene of the novel strain showing 98% or more  
 CC homology with a nucleotide sequence of a fully defined 1511 nucleotide  
 CC (AED11327) sequence given in specification. The novel strain is useful  
 CC for the bioremediation of an oil-polluted environment, such as river  
 CC water, underground water, ocean, sea cost, etc. The novel strain degrades  
 CC linear or branched aliphatic hydrocarbons efficiently. This  
 CC polynucleotide sequence represents the DNA of the novel Rhodococcus  
 CC erythropolis M-13 strain 16S rRNA gene of the invention.

 DR Novel antibiotics isolated from fermentation broth of novel strain of  
 XX Microbispora corallina, useful for treating a wide range of bacterial  
 PT infections.  
 PT Disclosure; SEQ ID NO 1; 20pp; English.  
 PS The invention relates to antibiotic MF-BA-1768alpal or MF-BA-1768-betal  
 XX or its pharmaceutically acceptable salt, having physicochemical  
 CC characteristics in the non-salt form as detailed in the specification.  
 CC The antibiotics are isolated from a novel strain of Microbispora  
 CC corallina designated NRRL 30420. Also included are producing the above  
 CC antibiotic (by cultivating Microbispora corallina NRRL 30420, or an  
 CC antibiotic MF- BA-1768alpal or MF-BA-1768betal -producing mutant,  
 CC variant or its recombinant form, in a culture medium containing  
 CC assimilable sources of carbon, nitrogen and inorganic salts under aerobic  
 CC fermentation conditions until the antibiotic is produced and then  
 CC recovering the antibiotic) and a composition comprising the above  
 CC antibiotic or its salt. The antibiotics are useful for treating a  
 CC bacterial infection caused by Staphylococcus (e.g. S.aureus, S.epidermis  
 CC, S.haemolyticus ), Enterococcus (e.g. E.faecalis, E.faecium ),  
 CC Streptococcus (e.g. S.pneumoniae, S.pyrogenes ), Haemophilus (e.g.  
 CC H.influenzae ) or Escherichia (e.g. E.coli ) in a patient. The present  
 CC sequence is partial 16S rRNA sequence from M. corallina NRRL 30420, which  
 CC identifies the strain.

CC combination of a magnesium chelator, a nonionic detergent and an anionic  
 CC detergent; and (iii) heating the cells to 75-99 degrees Celsius until the  
 CC mycobacterial cells are lysed; and (b) detecting the pre-rRNA using at  
 CC least one oligonucleotide probe which is capable of selectively  
 CC hybridizing to a region of the pre-rRNA that is not present in a mature  
 CC mycobacterial rRNA. The probes can be used to identify many Mycobacterium  
 CC spp. including M. tuberculosis, M. leprae, M. habana, M. avium, M. bovis,  
 CC M. lufu, M. paratuberculosis, M. marinum, M. simiae and/or M.  
 CC intracellular. The probes may also be used to measure mycobacterial  
 CC response to inhibitors of RNA and protein synthesis and may therefore be  
 CC used to screen new antimycobacterial drugs. Mycobacteria have a slow  
 CC growth rate. By using the probes, drug developers can now identify  
 CC compounds that are more effective, but less stable than those previously  
 CC identified. (Updated on 17-OCT-2003 to standardise OS field.)

Species-specific bacterial identification, used particularly to identify  
 PT Mycobacterium species, involves hybridizing bacterial genus-selective or  
 PT specific primers to a sample.  
 XX  
 PS Claim 28; Page 21; 43pp; English.

CC The invention relates to a method of species-specific bacterial  
 CC identification, comprising hybridising a bacterial genus-selective or  
 CC specific primer to a sample and amplifying nucleic acids. This is  
 CC followed by hybridising the amplified nucleic acid to a solid phase array  
 CC comprising bacterial species specific probe oligonucleotides chemically  
 CC linked to a polymeric support in a predetermined pattern. This method is  
 CC used for species-specific identification of a bacterium, particularly a  
 CC Mycobacterium, especially M. gordonae, M. intracellulare, M. avium, M.  
 CC tuberculosis, M. marinum, or M. kansasii. The method provides rapid  
 CC identification of multiple species of Mycobacterium. AAS30686-AAS30720

CC represent Mycobacterium species-specific primers and probes used in the  
 CC method of the invention. (Updated on 06-AUG-2003 to correct OS field.)

Species-specific bacterial identification, used particularly to identify  
 PT Mycobacterium species, involves hybridizing bacterial genus-selective or  
 PT specific primers to a sample.  
 XX  
 PS Claim 28; Page 21; 43pp; English.

CC The invention relates to a method of species-specific bacterial  
 CC identification, comprising hybridising a bacterial genus-selective or  
 CC specific primer to a sample and amplifying nucleic acids. This is  
 CC followed by hybridising the amplified nucleic acid to a solid phase array  
 CC comprising bacterial species specific probe oligonucleotides chemically  
 CC linked to a polymeric support in a predetermined pattern. This method is  
 CC used for species-specific identification of a bacterium, particularly a  
 CC Mycobacterium, especially M. gordonae, M. intracellulare, M. avium, M.  
 CC tuberculosis, M. marinum, or M. kansasii. The method provides rapid  
 CC identification of multiple species of Mycobacterium. AAS30686-AAS30720  
 CC represent Mycobacterium species-specific primers and probes used in the  
 CC method of the invention. (Updated on 06-AUG-2003 to correct OS field.)

PS Disclosure; Fig 7; 20pp; English.

XX The invention describes a new method for diagnosis, identification and

CC characterisation of Mycobacterium tuberculosis or any other mycobacteria

CC by using polymerase chain reaction (PCR) and shift mobility assay (SMA)

CC in urea-polyacrylamide gel (UPAGE) comprises culturing, DNA extraction,

CC DNA amplification and Shift mobility assay. The method is based on

CC divergence in sequences found in 16S rRNA to identify mycobacteria

CC species, since a remarkable shift of heteroduplex bands are obtained

CC between single stranded and homoduplex bands in UPAGE. The method is

CC fast, simple and can produce information not easily obtained when

CC compared with other detection methods. The sensitivity of other assays

CC suffer due to the tendency of the denatured PCR product strands to

CC reassociate and exclude oligonucleotide probes, and steric interference

CC between the bound oligonucleotides and the solid support which impede

CC hybridization to nucleic acids in solution. Sequences AAX99193-237

CC represent 16S rRNA gene regions of some mycobacterial species

XX

XX Claim 2; SEQ ID NO 143; 150pp; Japanese.

XX

CC The present invention relates to probes (ADF93908-ADF94059) for the

CC specific detection and identification of harmful microorganisms in

CC samples of foods and drug compositions. The probe sequences are derived

CC from the V1, V2 and/or V3 regions of the 16S rRNA of the microorganism,

CC or its complementary sequence. Detection and identification of the

CC microorganism is by amplification of the complete 16S rRNA gene using

CC primers ADF94060 and ADF94061. Labelling the amplification product (a

CC

XX

CC fluorescence label is preferred), and hybridising to the probe or probes  
 CC of the invention. The probes may be immobilised on a DNA chip. The  
 CC microorganism is selected from Actinobacillus actinomycetocornitans,

XX
XX Determining a bacterium species comprises providing oligonucleotide
XX primer set comprising SEQ-FOR and SEQ-REV in a complimentary fashion.
XX Disclosure; SEQ ID NO 12; 74pp; English.
XX
XX The invention relates to a method (M1) for determining a bacterium
XX species. (M1) comprises: (a) culturing a bacterium from a specimen; (b)
XX extracting a genomic nucleotide from the bacterium to provide a
XX nucleotide template; (c) annealing a region of a nucleotide template to a
XX specific oligonucleotide primer set comprising SEQ-FOR and SEQ-REV in a
XX complimentary fashion, the primer set designed to provide a product
XX having a predetermined size dictated by a complementary primer set; (d)
XX amplifying the region of the nucleotide template to produce the product;
XX and (e) determining a species of a bacterium in a nucleotide sequence of
XX the product. Also described is an alternative method (M2) for determining
XX a bacterium species comprising: (a) providing a specimen or a sample
XX having a template; (b) providing a pair of primers selected from: (i) a
XX first forward primer having consecutive bases of an AFB-f comprising any
XX of the 36 sequences of 15-22 bp (AEA22417-AEA22452), or their fragments
XX or variations and a first reverse primer having consecutive bases of an
XX AFB-r comprising any of the 36 sequences of 15-22 bp (AEA22453-AEA22488)
XX or their fragments or variations, (ii) a second forward primer having
XX consecutive bases of an UB-f comprising any of the 28 sequences of 15-21
XX bp (AEA22489-AEA22516) or their fragments or variations and a second
XX reverse primer having consecutive bases of an UB-r comprising any of the
XX 28 sequences of 15-21 bp (AEA22517-AEA22544) or their fragments or
XX variations, or (iii) a first forward primer having consecutive bases of
XX an AFB-f of AEA22417-AEA22452 or their fragments or variations and a
XX second reverse primer having consecutive bases of an UB-r of AEA22517-
XX AEA22544 or their fragments or variations; (c) the specimen; and (d)
XX comparing the product from the specimen with a nucleotide sequence from a
XX database to determine the bacterium species present in the specimen. The
XX methods are useful for determining a bacterium species. The present
XX sequence represents a Mycobacterium lentiflavum 16S rRNA nucleotide

XX CC
XX The invention relates to a method (M1) for determining a bacterium
XX species. (M1) comprises: (a) culturing a bacterium from a specimen; (b)

```

CC extracting a genomic nucleotide from the bacterium to provide a  
 CC nucleotide template; (c) annealing a region of a nucleotide template to a  
 CC specific oligonucleotide primer set comprising SEQ-FOR and SEQ-REV in a  
 CC complementary fashion, the primer set designed to provide a product  
 CC having a predetermined size dictated by a complementary primer set; (d)  
 CC amplifying the region of the nucleotide template to produce the product;  
 CC and (e) determining a species of a bacterium in a nucleotide sequence of  
 CC the product. Also described is an alternative method (M2) for determining  
 CC a bacterium species comprising: (a) providing a specimen or a sample  
 CC having a template; (b) providing a pair of primers selected from: (i) a  
 CC first forward primer having consecutive bases of an AFB-f comprising any  
 CC of the 36 sequences of 15-22 bp (AEA22417-AEA22452), or their fragments  
 CC or variations and a first reverse primer having consecutive bases of an  
 CC AFB-r comprising any of the 36 sequences of 15-22 bp (AEA22453-AEA22488)  
 CC or their fragments or variations, (ii) a second forward primer having  
 CC consecutive bases of an UB-f comprising any of the 28 sequences of 15-21  
 CC bp (AEA22489-AEA22516) or their fragments or variations and a second  
 CC reverse primer having consecutive bases of an UB-r comprising any of the  
 CC 28 sequences of 15-21 bp (AEA22517-AEA22544) or their fragments or  
 CC variations, or (iii) a first forward primer having consecutive bases of  
 CC an AFB-f of AEA22417-AEA22452 or their fragments or variations and a  
 CC second reverse primer having consecutive bases of an UB-r of AEA22517-  
 CC AEA22544 or their fragments or variations; (c) the specimen; and (d)  
 CC comparing the product from the specimen with a nucleotide sequence from a  
 CC database to determine the bacterium species present in the specimen. The  
 CC methods are useful for determining a bacterium species. The present  
 CC sequence represents a Mycobacterium avium 16S rRNA nucleotide sequence,  
 CC which is used in the exemplification of the present invention.

XX

PT Depleting or isolating targeted nucleic acids e.g. rRNA, involves using a  
 PT bridging oligonucleotide comprising bridging region and a targeting  
 PT region complementary to a targeted nucleic acid, and a capture  
 PT oligonucleotide.

XX Claim 4; Page 168; 209pp; English.

XX This invention relates to a novel method for isolating, depleting or  
 CC separating a targeted nucleic acid, such as rRNA, from a sample  
 CC comprising targeted and non-targeted nucleic acids. It effects a way of  
 CC enriching for non-targeted nucleic acids such as mRNAs. Isolating  
 CC sufficient quantities of high quality bacterial mRNA is a demanding  
 CC process which impedes analysis of bacterial gene expression in the  
 CC presence of host cells. A small percentage of bacterial mRNAs may be poly  
 CC -A tailed, but these are targeted for degradation and tend to be  
 CC unstable. As a result, the commonly employed method for mRNA purification  
 CC with eukaryotic cells, oligo-dT capture, is ineffective. The present  
 CC invention provides an alternative, more suitable method for mRNA  
 CC purification from prokaryotes. The method of the invention comprises the  
 CC incubation of a sample with a bridging oligonucleotide (containing a  
 CC targeting region) and subsequently incubating with a capture  
 CC oligonucleotide allowing the isolation of the target from the sample. The  
 CC method is useful for depleting or isolating targeted nucleic acid, for  
 CC example rRNA such as prokaryotic 16S or prokaryotic 23S, eukaryotic 17S  
 CC or 18S or eukaryotic 28S rRNA, from a sample. The rRNA sequence may  
 CC comprise any one of 64 fully defined sequences as given in the  
 CC specification. The present sequence is that of a DNA sequence which  
 CC represents the sequence of 16S rRNA of Mycobacterium avium related to the  
 CC invention.

PT Differentiating acid-fast bacterium e.g., *Mycobacterium avium* complex,  
PT useful for detecting mutant of *M. avium* complex, and for grouping strains  
PT of *M. kansasii*, involves detecting mutation in 16S rRNA gene of acid-fast  
PT bacterium.  
XX  
XX Claim 3; SEQ ID NO 1; 23pp; Japanese.  
XX  
XX This invention relates to a novel method of differentiating acid-fast  
CC bacterium, which involves detecting a mutation in the 16S rRNA gene of  
CC the acid-fast bacterium. The method is useful for differentiating acid-  
CC fast bacterium such as *M. avium* complex (MAC) or *M. kansasii*, in particular  
CC for detecting mutants of MAC, and for grouping strains of *M. kansasii*. The  
CC method is also useful for carrying out taxonomic-tree analysis of  
CC atypical-mycobacteria and enables detection of MAC accurately and  
CC reliably. The present sequence is that of a *Mycobacterium* 16S rRNA gene  
CC which may be used in the method of the invention.

PS
XX
XX The present invention relates to the isolation of novel microorganism
CC strains of Saccharothrix designated YS-44442 and YS-45494. Also disclosed
CC is a method for isolating 3-hydroxy-3-methylglutaryl (HMG)-CoA reductase
CC inhibitors such as pravastatin. The Saccharothrix strains YS-44442 and YS
CC -45494 are useful for producing pravastatin. The method involves
CC cultivating the strains at a suitable condition to generate a
CC fermentation broth, feeding compactin into the broth, fermenting the
CC broth for a period of time to convert the compactin to pravastatin, and
CC isolating the pravastatin from the broth. The fermentation broth is
CC cultivated for less than 2 days, preferably for 18 hours. The
CC fermentation broth is derived from a seed culture of the microorganism
CC which is cultivated at a suitable condition for 18-48 hours before
CC inoculation into the broth. The broth is fermented for less than 5 days,
CC preferably 3 days, most preferably less than 24 hours. The method of the
CC invention is useful for isolating HMG-CoA reductase inhibitor. Such as
CC pravastatin, compactin or lovastatin, preferably pravastatin. The
CC pravastatin or HMG-CoA reductase inhibitors are useful for reducing blood
CC cholesterol levels. The present sequence represents Saccharothrix strain
CC YS-44442 16S rDNA sequence.

XX PS
XX The invention relates to a novel binding inhibitor of muscarinic
CC acetylcholine receptor subtype 4 or 3, comprising a chelate having a TPU
CC 0052A-F compound or its salt and a metal ion. The invention further
CC comprises a method and a microorganism for producing the novel binding
CC inhibitor. The binding inhibitor and compound are useful as central
CC analgesics and memory improving drugs, for treating Parkinson's disease,
CC asthma, chronic obstructive pulmonary disease, overactive bladder,
CC frequent urination and urinary incontinence. This polynucleotide sequence
CC represents the 16S ribosomal DNA of a Nocardia sp. TP-A0674
CC microorganism, useful in producing a muscarinic acetylcholine receptor
CC binding inhibitor compound of the invention.

XX
XX New antibiotic compound, thiobutacin, is used to treat plant disease e.g.
XX phytophthora blight and to control plant diseases caused by pathogens
XX e.g. Phytophthora capsici and Botrytis cinerea.
XX
XX Example 2; SEQ ID NO 1; 17pp; English.
XX
XX The invention relates to an antibiotic compound thiobutacin and
XX antifungal and antioomycete compositions comprising thiobutacin.
XX Thiobutacin is used to treat plant disease such as phytophthora blight
XX and to control plant diseases caused by pathogens e.g. Phytophthora
XX capsici and Botrytis cinerea. The present sequence is the Lechevalieria
XX aerocolonigenes strain VK-A9 16S ribosomal DNA (rDNA). L. aerocolonigenes
XX strain VK-A9 has strong antifungal and antimicrobial activity and it can
XX inhibit the growth of Phytophthora capsici.

XX
XX Stereoselective synthesis of beta-amino acid such as D-beta- or L-beta-
XX phenylalanine, by contacting amino donor and amino acceptor in presence
XX of beta-amino acid transaminase to form beta-amino acid enantiomer, from
PT
PT amino acceptor.
XX
XX Claim 78; SEQ ID NO 2; 44pp; English.
XX
XX The invention relates to methods for the stereoselective synthesis and
XX for the enantiomeric enrichment of a beta-amino acid or its salt. The
XX methods involve contacting an amino donor and an amino acceptor in the
XX presence of a stereoselective beta-amino acid transaminase to form a beta
XX -amino acid enantiomer (or its salt) from the amino acceptor. The
XX invention also relates to purified stereoselective D-beta-transaminases
XX derived from a microorganism of the genera Variovorax, Nocardia,
XX Comamonas, Rhodococcus or Pseudomonas; purified stereoselective L-beta-
XX transaminases derived from a microorganism of the genus Alcaligenes;
XX methods of selecting and culturing microorganisms which express a beta-
XX transaminase; purified cultures of Variovorax paradoxus or Rhodococcus
XX opacus; the 16S ribosomal RNA gene (rDNA) of Variovorax paradoxus or
XX Rhodococcus opacus (ADW12666 and ADW12667, respectively); and a method of
XX detecting these 16S rDNA sequences. The methods of the invention are
XX useful for stereoselectively synthesizing a beta-amino acid such as D-
XX beta-phenylalanine or L-beta-phenylalanine, or for enriching one or the
XX other enantiomer in a racemic mixture. In the examples of the invention,
XX microorganisms from soil samples from two different environments were
XX screened transaminase activity on DL-beta-phenylalanine. Ribosomal DNA
XX sequencing was used to facilitate the taxonomic identification of two
XX purified microorganisms from the environmental samples. The present
XX sequence represents the specifically claimed 16S rDNA sequence which was
XX identified as originating from Rhodococcus opacus.

XX acid of Mycobacterium avium, Mycobacterium intracellulare, and
XX Mycobacterium kansasii.
XX

```

```

PS Claim 1; SEQ ID NO 13; 14pp; Japanese.
XX
XX The invention relates to a novel single-stranded oligonucleotide used in
CC a detection method of an atypical mycobacteria group. The invention
CC further includes: amplifying the nucleic acid of Mycobacterium avium by a
CC loop-mediated isothermal amplification (LAMP) method; amplifying the
CC nucleic acid of M. intracellulare by a LAMP method; and a kit for detecting the
CC nucleic acid of M. kansasii by a LAMP method; and a kit for detecting the
CC nucleic acid of M. avium by a LAMP method; detecting the nucleic acid of
CC M. intracellulare by a LAMP method; or detecting the nucleic acid of M.
CC kansasii by a LAMP method. The single-stranded oligonucleotide is useful
CC in medical applications. This oligo sequence represents a loop-mediated
CC isothermal amplification (LAMP) primer used in the exemplification of the
CC invention.

XX Fragments of Corynebacterium 16S RNA - useful as probes and primers for
XX identifying Corynebacterium spp.
XX
XX Claim 1; Fig 1; 60pp; French.
XX
XX Fragments covering 90 % of the sequence of 16S ribosomal RNA were
XX amplified from 28 strains of 25 different species of Corynebacterium by
XX PCR using primers specific for eubacteria. The amplification products
XX were sequenced and the sequences were aligned for comparison. It was
XX found that certain regions, i.e. those corresponding to nucleotides 72-
XX 100, 195-215, 466-494, 608-631, 838-853, 859-875 and 1013-1033 in the 16S
XX ribosomal RNA of C. diphtheriae (refer to features table for the present
XX sequence), vary considerably between different species. Probes and
XX primers comprising at least 5 nucleotides from one of these species-
XX specific sequences, including the present sequence, or their complements,
XX are useful to distinguish between different Corynebacterium species. DNA
XX versions of the probes and primers are also included

 XX PT Propionibacterium acnes polypeptides and nucleic acids useful for  
 PT vaccinating against and diagnosing infections, especially useful for  
 PT treating acne vulgaris.  
 XX PS Claim 1; SEQ ID NO 35; 1069pp; English.

Sequences AAS59506-AAS59804 represent DNA molecules encoding  
 Propionibacterium acnes immunogenic polypeptides. The proteins and their  
 associated DNA sequences are used in the treatment, prevention and  
 diagnosis of medical conditions caused by P. acnes. The disorders include  
 SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and  
 osteomyelitis), uveitis and endophthalmitis. P. acnes is also involved in  
 infections of bone, joints and the central nervous system, however it is  
 particularly involved in the inflammatory lesions associated with acne  
 vulgaris. A method for detecting the presence or absence of P. acnes in a  
 patient comprises contacting a sample with a binding agent that binds to  
 the proteins of the invention and determining the amount of bound protein  
 in the sample. The polypeptides may be used as antigens in the production  
 of antibodies specific for P. acnes proteins. These antibodies can be  
 used to downregulate expression and activity of P. acnes polypeptides and  
 therefore treat P. acnes infections. The antibodies may also be used as  
 diagnostic agents for determining P. acnes presence, for example, by  
 enzyme linked immunosorbent assay (ELISA). This sequence encodes the  
 polypeptides shown in AAU47822-AAU47846. Note: The sequence data for this  
 patent did not form part of the printed specification, but was obtained  
 in electronic format directly from WIPO at  
 ftp.wipo.int/pub/published\_pct\_sequences

 XX New Propionibacterium acnes polypeptides and polynucleotides encoding the  
 PT polypeptide, useful for diagnosing, preventing or treating acne vulgaris,  
 PT or for stimulating an immune response specific for a P. acnes protein.  
 PT  
 XX Claim 1; SEQ ID NO 35; 1491pp; English.  
 PS  
 XX The invention relates to an isolated polynucleotide (ACF64435-ACF64733)  
 CC encoding a Propionibacterium acnes protein. The invention also relates to  
 CC polypeptides encoded by the polynucleotides (ABM35624-ABM64536) and to  
 CC immunogenic fragments of P. acnes polypeptides. The invention  
 CC additionally encompasses expression vectors and host cells comprising a  
 CC polynucleotide of the invention; antibodies against polypeptides of the  
 CC invention; fusion proteins comprising a polypeptide of the invention; a  
 CC method for stimulating an immune response specific for a P. acnes  
 CC polypeptide and an isolated T cell population comprising T cells prepared  
 CC via this method; a vaccine composition (comprising P. acnes polypeptides,  
 CC polynucleotides, antibodies, fusion proteins, T cell populations, or  
 CC antigen-presenting cells that express the polypeptide); a method and kit  
 CC for detecting or determining the presence or absence of P. acnes in a  
 CC patient; and a method for inhibiting the development of P. acnes in a  
 CC patient. The P. acnes polypeptides, polynucleotides, antibodies, fusion  
 CC proteins, T cell populations or antigen-presenting cells that express the  
 CC polypeptides are useful for diagnosing, preventing or treating acne  
 CC vulgaris, or for stimulating an immune response specific for a P. acnes  
 CC protein. The polynucleotides can also be used as probes or primers for  
 CC nucleic acid hybridisation. The vaccine composition is useful for the  
 CC stimulation of an immune response against P. acnes, or for treating acne,  
 CC and the kit is useful for performing a diagnostic assay. The present  
 CC sequence represents a P. acnes DNA contig which is specifically claimed  
 CC in the invention. Note: The sequence data for this patent did not form  
 CC part of the printed specification, but was obtained in electronic format  
 CC directly from WIPO at ftp.wipo.int/pub/published\_pct\_sequences

XX New butenyl-spinosyn biosynthetic genes, useful for increasing the
XX production of butenyl-spinosyn insecticidal macrolides, or for changing
XX the metabolites or products produced by spinosyn-producing
XX microorganisms.
XX
XX Claim 2; Page 99-119; 218pp; English.
XX
XX The invention relates to a novel DNA molecule comprising a DNA sequence
XX that encodes a butenyl-spinosyn biosynthetic enzyme, a butenyl-spinosyn
XX PKS (polyketide synthetase) domain, or a spinosyn PKS module. The butenyl-
XX spinosyn biosynthetic genes are useful for increasing the production of
XX butenyl-spinosyn insecticidal macrolides. The genes are also useful for
XX changing the metabolites or products produced by spinosyn-producing
XX microorganisms. The present sequence represents a DNA molecule encoding
XX butenyl-spinosyn biosynthetic enzymes

XX Mycobacterial sensitivity and drug screening assays - involving release
XX of pre-rRNA by lysis.
XX
XX Example 4; Col 17-18; 50pp; English.
XX
XX This sequence represents a target sequence for mycobacterial probes. This
XX sequence represents a precursor RNA fragment that is released during the
XX method of the invention. The method is for the determination of
XX mycobacterial cell sensitivity to an antimicrobial agent, and comprises:
XX (a) culturing the cells in the presence of the antimicrobial agent; (b)
XX treating the cells by enzymatic or mechanical means to expose the cell
XX membrane to lysis reagents, and contacting the cells with a lysis reagent
XX under conditions such that pre-rRNA is released from the cells but not
XX degraded; and (c) detecting the pre-rRNA with an oligonucleotide probe
XX capable of hybridising to a region of the pre-rRNA that is not present in
XX mature mycobacterial rRNA, where sensitivity to the antimicrobial agent
XX is indicated by an increase or decrease in pre-rRNA levels for cells
XX exposed to the antimicrobial agent compared with mycobacterial cells not
XX exposed to the antimicrobial agent. The lysis method, unlike known
XX methods, results in detectable levels of pre-rRNA

 XX  
 CC The present sequence represents a mycobacterial mature ribosomal RNA  
 CC target sequence. The present invention describes a method for detecting  
 CC pre-rRNA in cells of a mycobacterial sample. The method comprises: (a)  
 CC treating the cells to release pre-rRNA by: (i) pretreating the cells by  
 CC enzymatic degradation using both lysozyme and protease until their cell  
 CC walls are rendered porous to expose their cell membranes, making the  
 CC cells susceptible to lysis; (ii) contacting the pretreated cells with a  
 CC combination of a magnesium chelator, a nonionic detergent and an anionic  
 CC detergent; and (iii) heating the cells to 75-99 degrees Celsius until the  
 CC mycobacterial cells are lysed; and (b) detecting the pre-rRNA using at  
 CC least one oligonucleotide probe which is capable of selectively  
 CC hybridizing to a region of the pre-rRNA that is not present in a mature  
 CC mycobacterial RNA. The probes can be used to identify many Mycobacterium  
 CC spp. including M. tuberculosis, M. leprae, M. habana, M. avium, M. bovis,  
 CC M. lufu, M. paratuberculosis, M. marinum, M. simiae and/or M.  
 CC intracellulare. The probes may also be used to measure mycobacterial  
 CC response to inhibitors of RNA and protein synthesis and may therefore be  
 CC used to screen new antimycobacterial drugs. Mycobacteria have a slow  
 CC growth rate. By using the probes, drug developers can now identify  
 CC compounds that are more effective, but less stable than those previously  
 CC identified

XX
CC The present invention relates to a method (M1) for identifying genes
CC involved in plant resistance or response to pathogenic infection. M1
CC comprises identifying a gene whose expression is significantly altered in
CC the incompatible interaction of plant gene expression relative to
CC expression of the gene in an uninfected plant, in a mutant plant that
CC does not express a gene associated with response to pathogenic infection,
CC or in a corresponding incompatible or compatible interaction. (M1) is
CC useful for conferring resistance to resistance or tolerance to a plant to
CC bacterial, fungal or viral infection. The present invention was used to
CC illustrate the invention.

PT Improving plant productivity comprises introducing into the plant or
PT propagation material an endophytic actinomycete that facilitates
PT induction of at least one characteristic related to improved
PT productivity.
XX
PS Claim 1; SEQ ID NO 1; 235pp; English.
XX
CC This invention relates to a novel method for improving plant
CC productivity. Specifically, it refers to introducing into the plant or
CC propagation material an endophytic actinomycetes or variant thereof,
CC where the actinomycetes facilitate induction of a characteristic related
CC to improved productivity. The present invention further describes
CC metabolites of the actinomycetes microorganism such as auxin, gibberellin
CC or cytokinin that are able to induce disease resistance in plants i.e.
CC provide disease bio-control capabilities against pathogen infection.
CC Accordingly, the method facilitates the improvement of cereal crop
CC productivity including increasing germination by up-regulating plant
CC growth promoting activities, as well as improving plant vigor or flower
CC and fruit yield. Furthermore, the new actinomycete or metabolite is
CC useful in the manufacture of a medicament for the therapeutic and/or
CC prophylactic treatment of a mammalian or non-mammalian subject i.e.
CC plant. As such, this method provides plant protectants and plant growth
CC stimulants that exhibit antibacterial, antimicrobial, fungicide,
CC insecticide and nematocide activities. This polynucleotide is the DNA
CC sequence of an actinomycetes 16s ribosomal RNA sequence of the invention.

PT rRNA or DNA encoding RNA in nucleic acid amplification mixture using
PT specific primers, and detecting the amplified nucleic acid.
XX
XX Claim 1; Page 37; 44pp; English.
XX
XX The invention relates to a method of detecting Mycobacterium species,
CC that involves amplifying Mycobacterium 16S ribosomal RNA (rRNA) or DNA
CC encoding 16S rRNA in an in vitro nucleic acid amplification mixture
CC comprising a polymerase, and at least two primers, and then detecting the
CC amplified nucleic acid. The method is relatively simple and useful for
CC detecting the presence of various Mycobacterium species in a biological
CC sample, and thus important for diagnosis of infections resulting from
CC them. The method is especially important for screening opportunistic
CC infections caused by M. tuberculosis or a Mycobacterium other than
CC tuberculosis (MOTT). The present sequence is a PCR primer used for
CC amplifying Mycobacterium 16S rRNA

XX Detecting Mycobacterium species, involves in vitro amplification of 16S  
PT rRNA or DNA encoding RNA in nucleic acid amplification mixture using  
PT specific primers, and detecting the amplified nucleic acid.

PS Claim 1; Page 37; 44pp; English.

XX The invention relates to a method of detecting Mycobacterium species,  
CC that involves amplifying Mycobacterium 16S ribosomal RNA (rRNA) or DNA  
CC encoding 16S rRNA in an in vitro nucleic acid amplification mixture  
CC comprising a polymerase, and at least two primers, and then detecting the  
CC amplified nucleic acid. The method is relatively simple and useful for  
CC detecting the presence of various Mycobacterium species in a biological  
CC sample, and thus important for diagnosis of infections resulting from  
CC them. The method is especially important for screening opportunistic  
CC infections caused by M. tuberculosis or a Mycobacterium other than  
CC tuberculosis (MOTT). The present sequence is a PCR primer used for  
CC amplifying Mycobacterium 16S rRNA

XX Obtaining sequence information from target biomolecule, by fragmenting

PT target biomolecule by partial cleavage, performing mass spectrometry,  
 PT extracting information from mass spectra, constructing sequencing graph  
 PT and traversing graphs.

XX Disclosure; SEQ ID NO 11; 133pp; English.

XX This invention describes a novel method for obtaining sequence  
 CC information from a target biomolecule and involves fragmenting the target  
 CC biomolecule into several fragments by partial cleavage, performing mass  
 CC spectrometry on fragments to produce mass spectra, extracting peak  
 CC information from the produced mass spectra, constructing sequencing graph  
 CC using the extracted peak information and traversing the sequencing graph  
 CC to reconstruct sequence information of the target biomolecule. The target  
 CC biomolecule is nucleic acid molecule such as DNA or RNA, or is a protein  
 CC and the compositions of the two fragments are the base compositions or  
 CC amino acid compositions. This method preferably involves subjecting the  
 CC nucleic acid molecule to partial cleavage reactions with one or more  
 CC specific cleavage reagents, thus generating two or more fragments that  
 CC are specific cleavage products, determining the molecular weights of the  
 CC two or more fragments, determining the possible base compositions of the  
 CC two or more fragments, ordering the possible base compositions of the two  
 CC or more fragments according to the number of specific cleavage sites that  
 CC are not cleaved in each fragment, constructing one or more sequencing  
 CC graphs that are a graph theoretical representation of the ordered base  
 CC compositions for the two or more fragments, and traversing the one or  
 CC more sequencing graph to reconstruct one or more underlying sequence  
 CC candidates, where each sequencing graph corresponds to the ordered base  
 CC compositions derived from a partial cleavage reaction with one base-  
 CC specific cleavage reagent. This method further involves scoring the one  
 CC or more underlying sequence candidates and determining the rank order of  
 CC fitness, where the scoring is done by statistical analysis or maximum  
 CC likelihood statistical analysis. This method determines epigenetic  
 CC changes in a target nucleic acid molecule relative to reference nucleic  
 CC acid molecule and allows the sequencing of large biomolecules. The  
 CC invention also describes a method of producing a candidate sequence of a  
 CC biomolecule which involves receiving several sequencing graphs having  
 CC several vertices and edges, where each vertex represents a compomer of  
 CC the biomolecule and each edge represents a cut base of the sequencing  
 CC graph and generating the candidate sequence by traversing several  
 CC sequencing graphs. This second method further involves traversing several  
 CC sequencing graphs by tracing through each sequencing graph, starting at a  
 CC source vertex. The results of each method can be read by a program  
 CC product for use in a computer that executes program instructions recorded  
 CC in a computer-readable media to produce a candidate sequence of a  
 CC biomolecule or to obtain sequence information in a target biomolecule.  
 CC The target biomolecule contains a sequence variation, which is a mutation  
 CC or a polymorphism. The target is a target nucleic acid molecule from an  
 CC organism chosen from eukaryotes, prokaryotes and viruses, preferably a  
 CC bacterium. The specific cleavage reagent is an RNase chosen from RNase  
 CC T1, RNase U2, RNase Phym, RNase A, chicken liver RNase (RNase CL3) and  
 CC cusavirin, or a glycosylase. The sequence variations in the target  
 CC biomolecule permit genotyping a subject, forensic analysis, disease  
 CC diagnosis or disease prognosis. The novel methods are useful for de novo  
 CC sequencing, to identify genetic disease or chromosome abnormality,  
 CC identifying a predisposition to a disease, or condition including  
 CC obesity, atherosclerosis, or cancer, to identify an infection by an  
 CC infectious agent, to identify a pathogen, determine haplotypes, analyze  
 CC microsatellite sequences, and short tandem repeat (STR) loci, determine  
 CC allelic variation and/or frequency, and analyze cellular methylation  
 CC patterns. This sequence represents an amplicon used to illustrate the  
 CC sequencing technique described in the invention.

XX
XX Determining a bacterium species comprises providing oligonucleotide
XX primer set comprising SEQ-FOR and SEQ-REV in a complimentary fashion.
XX
XX Disclosure; SEQ ID NO 11; 74pp; English.
XX
XX The invention relates to a method (M1) for determining a bacterium
XX species. (M1) comprises: (a) culturing a bacterium from a specimen; (b)
XX extracting a genomic nucleotide from the bacterium to provide a
XX nucleotide template; (c) annealing a region of a nucleotide template to a
XX specific oligonucleotide primer set comprising SEQ-FOR and SEQ-REV in a
XX complimentary fashion, the primer set designed to provide a product
XX having a predetermined size dictated by a complementary primer set; (d)
XX amplifying the region of the nucleotide template to produce the product;
XX and (e) determining a species of a bacterium in a nucleotide sequence of
XX the product. Also described is an alternative method (M2) for determining
XX a bacterium species comprising: (a) providing a specimen or a sample
XX having a template; (b) providing a pair of primers selected from: (i) a
XX first forward primer having consecutive bases of an AFB-f comprising any
XX of the 36 sequences of 15-22 bp (AEA22417-AEA22452), or their fragments
XX or variations and a first reverse primer having consecutive bases of an
XX AFB-r comprising any of the 36 sequences of 15-22 bp (AEA22453-AEA22488)
XX or their fragments or variations, (ii) a second forward primer having
XX consecutive bases of an UB-f comprising any of the 28 sequences of 15-21
XX bp (AEA22489-AEA22516) or their fragments or variations and a second
XX reverse primer having consecutive bases of an UB-r comprising any of the
XX 28 sequences of 15-21 bp (AEA22517-AEA22544) or their fragments or
XX variations, or (iii) a first forward primer having consecutive bases of
XX an AFB-f of AEA22417-AEA22452 or their fragments or variations and a
XX second reverse primer having consecutive bases of an UB-r of AEA22517-
XX AEA22544 or their fragments or variations; (c) the specimen; and (d)
XX comparing the product from the specimen with a nucleotide sequence from a
XX database to determine the bacterium species present in the specimen. The
XX methods are useful for determining a bacterium species. The present
XX sequence represents a Mycobacterium kubicae 16S rRNA nucleotide sequence,

PT positive for catalase, approximatelyb-galactosidase, nitrate reduction
PT ability, is useful as cyclic hydrocarbon degradation agent in waste-oil
PT treatment.
XX
XX Claim 2; SEQ ID NO 1; 12pp; Japanese.
XX
XX The invention relates to a novel microorganism belonging to the Gordonia
CC genus, a gram-positive bacillus. The novel microorganism having
CC biochemical properties positive for catalase, nitrate reduction ability,
CC alkali phosphatase, and beta-galactosidase, and negative for
CC pyrazinamidase, pyrolidonyl allyl amidase, beta-glucuronidase, alpha-
CC glucosidase, urease, gelatin-liquefaction ability, and esculin, glucose
CC and ribose utilisation ability. The invention further comprises: a GR-004
CC strain of Gordonia sp. having the accession number FERM P-18806; and a
CC cyclic hydrocarbon degradation agent containing the novel microorganism.
CC The Gordonia genus microorganism is useful for processing a cyclic
CC hydrocarbon-containing substance, which involves using the cyclic
CC hydrocarbon degradation agent, where the cyclic hydrocarbon-containing
CC substance is a waste engine oil. The Gordonia genus microorganism is
CC useful as a cyclic hydrocarbon degradation agent for waste-oil treatment.
CC This polynucleotide sequence represents the Gordonia sp. bacterium 16S
CC rDNA of the invention.

PT Determining a bacterium species comprises providing oligonucleotide
PT primer set comprising SEQ-FOR and SEQ-REV in a complimentary fashion.
XX
XX Disclosure; SEQ ID NO 14; 74pp; English.
XX
XX The invention relates to a method (M1) for determining a bacterium
CC species. (M1) comprises: (a) culturing a bacterium from a specimen; (b)
CC extracting a genomic nucleotide from the bacterium to provide a
CC nucleotide template; (c) annealing a region of a nucleotide template to a
CC specific oligonucleotide primer set comprising SEQ-FOR and SEQ-REV in a
CC complimentary fashion, the primer set designed to provide a product
CC having a predetermined size dictated by a complimentary primer set; (d)
CC amplifying the region of the nucleotide template to produce the product;
CC and (e) determining a species of a bacterium in a nucleotide sequence of
CC the product. Also described is an alternative method (M2) for determining
CC a bacterium species comprising: (a) providing a specimen or a sample
CC having a template; (b) providing a pair of primers selected from: (i) a
CC first forward primer having consecutive bases of an AFB-f comprising any
CC of the 36 sequences of 15-22 bp (AEA22417-AEA22452), or their fragments
CC or variations and a first reverse primer having consecutive bases of an
CC AFB-r comprising any of the 36 sequences of 15-22 bp (AEA22453-AEA22488)
CC or their fragments or variations, (ii) a second forward primer having
CC consecutive bases of an UB-f comprising any of the 28 sequences of 15-21
CC bp (AEA22489-AEA22516) or their fragments or variations and a second
CC reverse primer having consecutive bases of an UB-r comprising any of the
CC 28 sequences of 15-21 bp (AEA22517-AEA22544) or their fragments or
CC variations or (iii) a first forward primer having consecutive bases of
CC an AFB-f of AEA22417-AEA22452 or their fragments or variations and a
CC second reverse primer having consecutive bases of an UB-r of AEA22517-
CC AEA22544 or their fragments or variations; (c) the specimen; and (d)
CC comparing the product from the specimen with a nucleotide sequence from a
CC database to determine the bacterium species present in the specimen. The
CC methods are useful for determining a bacterium species. The present
CC sequence represents a Mycobacterium paraffinicum 16S rRNA nucleotide
CC sequence, which is used in the exemplification of the present invention.

 XX Production of seasoning liquors with the flavor of vegetables pickled in  
 PT salted rice bran.  
 XX  
 XX Disclosure; Page 41-43; 45pp; Japanese.  
 XX The invention relates to a method of producing seasoning liquors with the  
 CC flavour of vegetables pickled in salted rice bran paste by culturing a  
 CC microorganism in a rice bran dispersion to produce gamma-dodecalactone  
 CC and/or gamma-dodecalactone. The microorganism produces lactic acid,  
 CC propionic acid, gamma-dodecalactone and/or gamma-dodecalactone. The  
 CC microorganism is especially a novel strain of *Corynebacterium* (strain NK-  
 CC 1, FERM BP-6329) with properties defined in the specification. This  
 CC sequence represents the 16S rRNA gene from the novel *Corynebacterium*  
 CC strain. The seasoning liquor is used for preparing a salted rice bran  
 CC pickle bed which provides pickles

XX PT Gordonia genus Actinomyces for purifying fresh water and seawater useful  
 PT in raising ayu fish, flatfish, blowfish and gold fish, has ammonia  
 PT utilizing ability and nitrous acid oxidation ability.

XX PS Disclosure; SEQ ID NO 1; 16pp; Japanese.

XX CC This invention relates to a novel Gordonia genus Actinomyces which has

CC ammonia utilizing ability and nitrous acid oxidation ability. The  
 CC invention may be useful for purifying fresh water and seawater, of  
 CC particular use in raising ayu fish, flatfish, blowfish and gold fish. The  
 CC Gordonia genus actinomyces effectively suppresses concentration of  
 CC ammonia and nitrous acid in fresh water and seawater, and provides  
 CC purified water that is favourable for raising fishes.

XX PT Production of astaxanthin and canthaxanthine useful as fodder and feed  
 PT for livestock, domestic fowl and fish, involves cultivating Actinomyces  
 PT belonging to Gordonia genus.

XX PS Disclosure; SEQ ID NO 1; 13pp; Japanese.

XX CC This invention relates to a novel method for producing astaxanthin and  
 CC canthaxanthine. Specifically, it refers to the cultivation of Actinomyces  
 CC microbial cells belonging to the Gordonia genus using a fresh water or  
 CC sea water mineral nutrition containing culture medium. The present  
 CC invention describes producing astaxanthin and canthaxanthine for use as a  
 CC fodder for livestock and domestic fowl, as well as a feed for fish  
 CC breeding. The production method uses natural products and is efficient at  
 CC a low cost. This polynucleotide sequence is a DNA copy of RNA isolated  
 CC from the Gordonia sp. Kammonkai-1129 microorganism of the invention.

 PT Detecting Mycobacterium species, involves in vitro amplification of 16S  
 PT rRNA or DNA encoding RNA in nucleic acid amplification mixture using  
 PT specific primers, and detecting the amplified nucleic acid.  
 XX  
 PS Claim 1; Page 35; 44pp; English.  
 XX  
 CC The invention relates to a method of detecting Mycobacterium species,  
 CC that involves amplifying Mycobacterium 16S ribosomal RNA (rRNA) or DNA  
 CC encoding 16S rRNA in an in vitro nucleic acid amplification mixture  
 CC comprising a polymerase, and at least two primers, and then detecting the  
 CC amplified nucleic acid. The method is relatively simple and useful for  
 CC detecting the presence of various Mycobacterium species in a biological  
 CC sample, and thus important for diagnosis of infections resulting from  
 CC them. The method is especially important for screening opportunistic  
 CC infections caused by M. tuberculosis or a Mycobacterium other than  
 CC tuberculosis (MOTT). The present sequence is a PCR primer used for  
 CC amplifying Mycobacterium 16S rRNA

First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is: GCTACATGAT, subfornical organ and area postrema."

This sequence was derived from the FAPESP Schistosoma mansoni EST
Genome Project. All sequences in the project were assembled and
annotated. This entry and all the assembled sequences can be seen
in the following URL http://bioinfo.iq.usp.br/schisto/
Plate: MEI-0071G-Al60 Row: 4 column: E.

/note="Vector: Lambda Zap; Shoot tissues were collected
from tall fescue, Festuca arundinacea Schreb, cv. Kentucky
31 planted in field during mid-July 2003. Samples were
harvested on July 11, 15, 18, 20, 21 - 2003 with air
temperature at 35.2C, 35.5C, 37.1C, 38.7C, and 37.1C,
respectively. Entire shoots from two tillers of three
plants were collected on each day. Equal amounts of total
RNA from each of the five samples were pooled together for
mRNA isolation and cDNA library construction."

            This library was generated by cloning cDNAs directionally into
            Uni-ZAP(Stratagene) (T3 primer/EcoRI are at the 5'-end and T7/XhoI
            are at the 3'-end). The library was excised [now in pBluescript
            SK(+)] and normalized (Bonaldo et al 1996 Genome Research
            6:791-806). Library constructed by Thomas Baum (tbaum@iastate.edu),
            Iowa State University, Plant Pathology Department and Jeff
            McDermott (jpmcderm@iastate.edu).
            Seq primer: T3 from Gibco.

            F2, F3, and F4 lines of Aquilegia formosa x A. pubescens
            were grown from seed in greenhouses at UC Santa Barbara.
            From these plants three sets of tissue were collected: 1)
            Small flower buds (<10 mm) and very young inflorescences
            (71 & 29% by weight respectively), 2) Medium (7-20 mm) and
            large (at or near anthesis) flower buds (65 & 35% by
            weight respectively) and 3) Shoot apical meristems. A
            fourth set of tissue was collected from plants of A.
            formosa. These plants were grown from seed in sand and at
            approximately 1 month root tissue and leaf tissue of
            various developmental stages were collected (84 & 16% by
            weight respectively). Total RNA was extracted from each
            set of tissue and pooled in the following proportions:
            1.5X from sets 1 & 2, 1X from sets 3 & 4. From the pooled
            total RNA, mRNA was extracted and enriched for full-length
            messages and then normalized with proprietary methods by
            Invitrogen."

/note="vector: pCMV SPORT6.1; Site 1: EcoRI; Site 2: NotI;  
 F2, F3, and F4 lines of Aquilegia formosa X A. pubescens  
 were grown from seed in greenhouses at UC Santa Barbara.  
 From these plants three sets of tissue were collected: 1)  
 Small flower buds (<10 mm) and very young inflorescences  
 (71 & 29% by weight respectively), 2) Medium (7-20 mm) and  
 large (at or near anthesis) flower buds (65 & 35% by  
 weight respectively) and 3) Shoot apical meristems. A  
 fourth set of tissue was collected from plants of A.  
 formosa. These plants were grown from seed in sand and at  
 approximately 1 month root tissue and leaf tissue of  
 various developmental stages were collected (84 & 16% by  
 weight respectively). Total RNA was extracted from each  
 set of tissue and pooled in the following proportions:  
 1.5X from sets 1 & 2, 1X from sets 3 & 4. From the pooled  
 total RNA, mRNA was extracted and enriched for full-length  
 messages and then normalized with proprietary methods by  
 Invitrogen."

                    HVCdNA0001 (Cold stress)"
                /note="Vector: lambdaZAP; Site 1: EcoRI; Site 2: XhoI;
                Seeds were surface sterilized then germinated under axenic
                conditions in the dark at room temperature on filter paper
                with water, nystatin and cefotaxime in covered
                crystallization dishes. Five-day old seedlings were
                incubated at 50C for 2 days. Shoots were then harvested,
                total RNA was prepared, poly(A) RNA was purified, One
                primary unamplified cDNA library was made, and 600000 pfu
                were in vivo excised to give pBluescript SK(-) cDNA
                phagemids. These steps were performed in the TJ Close
                laboratory at the University of California, Riverside
                (Choi, Close, Fenton). Phagemids were plated and picked at
                the Clemson University Genomics Institute (CUGI) (Begum,
                Palmer, Frisch, Atkins and Wing). Plasmid DNA
                preparations, DNA sequencing and sequence analysis were
                performed at CUGI (Wing, Yu, Frisch, Henry, Simmons,
                Oates, Rambo, Main). The sequence has been trimmed to
                remove vector sequence and contains a minimum of 100 bases
                of phred value 20 or above. For more details on library
                preparation and sequence analysis see
                http://www.genome.clemson.edu/projects/barley. To order
                this clone see http://www.genome.clemson.edu/orders Also

 /note="Vector: lambdaZAP; Site 1: EcoRI; Site 2: XhoI;  
 Plants were grown in the greenhouse at the University of  
 California, Riverside (Fenton, SJ Close, TJ Close). Whole  
 spikes with awns trimmed were collected at 5, 10, 15, 20,  
 30 and 45 DAP (Fenton). Total RNA was prepared from each  
 pool, equal quantities of all six RNA pools were combined,  
 poly(A) RNA was purified from the mixture, one primary  
 unamplified cDNA library was made, and 1 million pfu were  
 in vivo excised to give pluescript SK(-) cDNA phagemids  
 (Choi) in the TJ Close lab at the University of California,  
 Riverside. Phagemids were plated and picked at the Clemson  
 University Genomics Institute (CUGI) (Begum, Palmer,  
 Frisch, Atkins and Wing). Plasmid DNA preparations, DNA  
 sequencing and sequence analysis were performed at CUGI  
 (Wing, Yu, Frisch, Henry, Simmons, Oates, Rambo, Main).  
 The sequence has been trimmed to remove vector sequence  
 and contains a minimum of 100 bases of phred value 20 or  
 above. For more details on library preparation and  
 sequence analysis see  
<http://www.genome.clemson.edu/projects/barley>. To order  
 this clone see <http://www.genome.clemson.edu/orders> Also

 isolated from the indicated stickleback tissue, and a cDNA  
 library was constructed in the Express 1 plasmid vector by  
 Open Biosystems. First strand cDNA synthesis was primed  
 with an 54 bp linker primer containing an oligodT sequence  
 preceded by a synthetic NotI site (first strand primer:  
 5'-GACTAGTTCTAGATCGAGCGGCCGCTT25-3'). Following  
 second strand synthesis, cDNAs were made blunt at the end  
 corresponding to the original 5 prime end of mRNA, and  
 cloned directionally into the NotI and EcoRV sites of  
 Express 1. Note that the EcoRV site is typically destroyed  
 in the blunt end cloning, leaving a junction of the form  
 'xxxATC' (where is ATC is the second half of the EcoRV  
 site, and xxx is derived from the cDNA sequence). A map of  
 the Express 1 vector is available at:  
 http://www.openbiosystems.com/cdna.library.construction.fa  
 g.php#8 The primary library was transformed and amplified  
 in DH10B (T1 phage resistant) bacteria. Clones available  
 from Open Biosystems:  
 http://www.openbiosystems.com/stickleback"

An Arabidopsis full-length cDNA library was constructed essentially
as reported previously (Seki et al., 1998). This clone is in a
modified pBluescript vector as a SstI/XhoI insert. Please visit our
web site (http://www.gsc.riken.go.jp/e/plant/index\_e.html) for
further details.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

 PT Decomposing formaldehyde by Mycobacterium and/or growth medium of the  
 PT cells.  
 XX  
 PS Example 1; SEQ ID NO 1; 20pp; Japanese.  
 XX  
 CC The invention relates to a novel method for decomposing formaldehyde by  
 CC using microbial cells that belong to Mycobacterium sp. or Fusarium  
 CC oxysporum, and/or the growth medium of the microbial cells. The invention  
 CC further comprises: microbial cells which belong to Mycobacterium sp.  
 CC having the ability to decompose formaldehyde; a formaldehyde  
 CC decomposition agent comprising Mycobacterium sp. and/or the growth medium  
 CC of the microbial cells; and a formaldehyde decomposition agent comprising  
 CC F. oxysporum and/or its growth medium. The method is useful for  
 CC decomposing formaldehyde in sea water by Mycobacterium sp. or F.  
 CC oxysporum that is deposited under FERM P-S18690 or FERM P-18483,  
 CC respectively. This polynucleotide sequence represents the Mycobacterium  
 CC sp. DNA of the invention.

 PS Disclosure; SEQ ID NO 6; 74pp; English.  
 XX  
 CC The invention relates to a method (M1) for determining a bacterium  
 CC species. (M1) comprises: (a) culturing a bacterium from a specimen; (b)  
 CC extracting a genomic nucleotide from the bacterium to provide a  
 CC nucleotide template; (c) annealing a region of a nucleotide template to a  
 CC specific oligonucleotide primer set comprising SEQ-FOR and SEQ-REV in a  
 CC complimentary fashion, the primer set designed to provide a product  
 CC having a predetermined size dictated by a complimentary primer set; (d)  
 CC amplifying the region of the nucleotide template to produce the product;  
 CC and (e) determining a species of a bacterium in a nucleotide sequence of  
 CC the product. Also described is an alternative method (M2) for determining  
 CC a bacterium species comprising: (a) providing a specimen or a sample  
 CC having a template; (b) providing a pair of primers selected from: (i) a  
 CC first forward primer having consecutive bases of an AFB-f comprising any  
 CC of the 36 sequences of 15-22 bp (AEA22417-AEA22452), or their fragments  
 CC or variations and a first reverse primer having consecutive bases of an  
 CC AFB-r comprising any of the 36 sequences of 15-22 bp (AEA22453-AEA22488)  
 CC or their fragments or variations, (ii) a second forward primer having  
 CC consecutive bases of an UB-f comprising any of the 28 sequences of 15-21  
 CC bp (AEA22489-AEA22516) or their fragments or variations and a second  
 CC reverse primer having consecutive bases of an UB-r comprising any of the  
 CC 28 sequences of 15-21 bp (AEA22517-AEA22544) or their fragments or  
 CC variations, or (iii) a first forward primer having consecutive bases of  
 CC an AFB-f of AEA22417-AEA22452 or their fragments or variations and a  
 CC second reverse primer having consecutive bases of an UB-r of AEA22517-  
 CC AEA22544 or their fragments or variations; (c) the specimen; and (d)  
 CC comparing the product from the specimen with a nucleotide sequence from a  
 CC database to determine the bacterium species present in the specimen. The  
 CC methods are useful for determining a bacterium species. The present  
 CC sequence represents a Mycobacterium fortuitum 16S rRNA nucleotide  
 CC sequence, which is used in the exemplification of the present invention.

XX  The present invention relates to novel cell growth, differentiation and
XX  death (CGDD) proteins and polynucleotides encoding them. The sequences of
XX  the invention are useful in diagnosing, preventing and treating disorders
XX  associated with an abnormal expression or activity of CGDD such as
XX  neurodegenerative disorders (e.g. Parkinson's disease, Alzheimer's
XX  disease), muscular disorders (e.g. myotonic dystrophy, catatonia),
XX  endocrine disorders (e.g. diabetes, Grave's disease), cancers (e.g.
XX  leukaemia, cervical or breast cancers), immunological disorders (e.g.
XX  scleroderma, systemic lupus erythematosus, allergies), gastrointestinal
XX  disorders (e.g. Crohn's disease), renal disorders (e.g. Goodpasture's
XX  syndrome), infections (e.g. viral, bacterial, fungal, parasitic,
XX  protozoal, helminthic), cardiovascular disorders (e.g. atherosclerosis)
XX  and hepatic diseases (e.g. cirrhosis). The polynucleotides can be used to
XX  create humanised animals or transgenic animals to model human diseases.
XX  The invention is also used in gene therapy. The present sequence is human

XX  Mycobacterial sensitivity and drug screening assays - involving release
XX  of pre-rRNA by lysis.
XX
XX  Example 4; Col 17-18; 50pp; English.
XX
XX  This sequence represents a target sequence for mycobacterial probes. This
XX  sequence represents a precursor RNA fragment that is released during the
XX  method of the invention. The method is for the determination of
XX  mycobacterial cell sensitivity to an antimicrobial agent, and comprises:
XX  (a) culturing the cells in the presence of the antimicrobial agent; (b)
XX  treating the cells by enzymatic or mechanical means to expose the cell
XX  membrane to lysis reagents, and contacting the cells with a lysis reagent
XX  under conditions such that pre-rRNA is released from the cells but not
XX  degraded; and (c) detecting the pre-rRNA with an oligonucleotide probe
XX  capable of hybridising to a region of the pre-rRNA that is not present in
XX  mature mycobacterial rRNA, where sensitivity to the antimicrobial agent
XX  is indicated by an increase or decrease in pre-rRNA levels for cells
XX  exposed to the antimicrobial agent compared with mycobacterial cells not
XX  exposed to the antimicrobial agent. The lysis method, unlike known
XX  methods, results in detectable levels of pre-rRNA

CC      The present sequence represents a mycobacterial mature ribosomal RNA
CC      target sequence. The present invention describes a method for detecting
CC      pre-rRNA in cells of a mycobacterial sample. The method comprises: (a)
CC      treating the cells to release pre-rRNA by: (i) pretreating the cells by
CC      enzymatic degradation using both lysozyme and protease until their cell
CC      walls are rendered porous to expose their cell membranes, making the
CC      cells susceptible to lysis; (ii) contacting the pretreated cells with a
CC      combination of a magnesium chelator, a nonionic detergent and an anionic
CC      detergent; and (iii) heating the cells to 75-99 degrees Celsius until the
CC      mycobacterial cells are lysed; and (b) detecting the pre-rRNA using at
CC      least one oligonucleotide probe which is capable of selectively
CC      hybridizing to a region of the pre-rRNA that is not present in a mature
CC      mycobacterial rRNA. The probes can be used to identify many Mycobacterium
CC      spp. including M. tuberculosis, M. leprae, M. habana, M. avium, M. bovis,
CC      M. lufu, M. paratuberculosis, M. marinum, M. simiae and/or M.
CC      intracellulare. The probes may also be used to measure mycobacterial
CC      response to inhibitors of RNA and protein synthesis and may therefore be
CC      used to screen new antimycobacterial drugs. Mycobacteria have a slow
CC      growth rate. By using the probes, drug developers can now identify
CC      compounds that are more effective, but less stable than those previously
CC      identified

XX PT Novel Streptomyces sp. produced polypeptide for hydroxylation of
PT compactin at 6beta-position and its encoded DNA, applicable in
PT constructing transformant microbes to synthesize pravastatin for treating
PT hyperlipedemia.
XX PS Disclosure; Page 50-51; 67pp; Japanese.
XX CC The present invention describes a DNA sequence which contains a base
CC sequence from bases 544-1758 in the sequence of (I) with 1992 base pairs,
CC or a DNA hybridisable with the DNA under stringent conditions and
CC encoding a polypeptide with hydroxylase activity on compactin at 6beta-
CC position. Also described: (1) DNA containing base sequences from bases
CC 544-1758 and from bases 1782-1970 in the sequence of (I) or a DNA
CC hybridisable with the DNA under stringent conditions and encoding a
CC polypeptide with hydroxylase activity on compactin at the 6beta-position;
CC (2) a polypeptide encoded by any of the DNA or containing an amino acid
CC sequence based on the polypeptide but with some amino acids deleted,
CC substituted or added and having hydroxylase activity on compactin at the
CC 6beta-position; (3) a recombinant DNA obtained by integrating with any of
CC the DNA; (4) a microorganism transferred with the recombinant DNA; (5) a
CC process for producing pravastatin by culturing the transformant
CC microorganism before isolating the culture liquor or cells, and addition
CC of compactin for reaction to give pravastatin for recovery; and (6)
CC Streptomyces sp. TW-6 (FERM BP-8002) or TW-7 (FERM BP-8003). (I) has
CC antilipaeamic activity. The polypeptide and its encoded DNA are applicable
CC in constructing transformant microorganisms to synthesise pravastatin for
CC treating hyperlipidaemia. With the recombinant microorganisms,
CC pravastatin can be produced efficiently, with much less galpha
CC hydroxylated epimer formed. The present sequence represents a
CC Microtetraspora recticatena IFO14525 nucleotide sequence, which is given
CC in the exemplification of the present invention

PT quantitative measurement of cyclosporin A in blood, by incubating
PT cyclosporin A in presence of Dactylosporangium and extracting cyclosporin
PT derivative.
XX PS Disclosure; SEQ ID NO 2; 12pp; Japanese.
XX CC The invention relates to a novel method for producing a cyclosporin
CC derivative. The method involves incubating cyclosporin A in the presence
CC of a strain belonging to Dactylosporangium, Streptomycetes, Nocardia,
CC Pseudonocardia or Streptosporangium or its cultured microbial cells and
CC extracting the cyclosporin derivative from the incubated liquid. The
CC cyclosporin derivative is used as a reference standard for quantitative
CC measurement of cyclosporin A and its metabolite in blood and urine. This
CC polynucleotide represents a Streptosporangium 16S rDNA sequence used in
CC the cyclosporin production method of the invention.

XX Improving plant productivity comprises introducing into the plant or  
 PT propagation material an endophytic actinomycete that facilitates  
 PT induction of at least one characteristic related to improved  
 PT productivity.

XX Example 18; Fig 19; 235pp; English.

XX This invention relates to a novel method for improving plant  
 CC productivity. Specifically, it refers to introducing into the plant or  
 CC propagation material an endophytic actinomycetes or variant thereof,  
 CC where the actinomycetes facilitate induction of a characteristic related  
 CC to improved productivity. The present invention further describes  
 CC metabolites of the actinomycetes microorganism such as auxin, gibberellin  
 CC or cytokinin that are able to induce disease resistance in plants i.e.  
 CC provide disease bio-control capabilities against pathogen infection.  
 CC Accordingly, the method facilitates the improvement of cereal crop  
 CC productivity including increasing germination by up-regulating plant  
 CC growth promoting activities, as well as improving plant vigor or flower  
 CC and fruit yield. Furthermore, the new actinomycete or metabolite is  
 CC useful in the manufacture of a medicament for the therapeutic and/or  
 CC prophylactic treatment of a mammalian or non-mammalian subject i.e.  
 CC plant. As such, this method provides plant protectants and plant growth  
 CC stimulants that exhibit antibacterial, antimicrobial, fungicide,  
 CC insecticide and nematocide activities. This polynucleotide is the DNA  
 CC sequence of an actinomycetes 16S ribosomal RNA sequence of the invention.

XX Novel nucleic acid fragment useful for converting ketone substrates to  
 PT the corresponding lactone or ester, is isolated from Rhodococcus,  
 PT Arthrobacter or Acidovorax, encoding Baeyer-Villiger monooxygenase  
 PT polypeptide.

XX Claim 54; SEQ ID NO 6; 225pp; English.

XX The invention relates to a novel isolated nucleic acid fragment  
 CC comprising a fragment encoding a Baeyer-Villiger (BV) monooxygenase  
 CC polypeptide having a sequence of 542, 541, 439, 518, 462, 523, 493, 539,  
 CC 649, 494, 499, 545, 532 or 538 amino acids defined in the specification;  
 CC a nucleic acid molecule that hybridises with the above sequence under the  
 CC hybridisation conditions; or their complements. The BV monooxygenase  
 CC fragment is useful for obtaining a nucleic acid fragment encoding a BV  
 CC monooxygenase polypeptide, by probing a genomic library with the  
 CC fragment, identifying a DNA clone that hybridises with the fragment, and  
 CC sequencing the genomic fragment that comprises the above identified  
 CC clone, where the sequenced genomic fragment encodes a BV monooxygenase  
 CC polypeptide. The genes and their products are useful for converting  
 CC suitable ketone substrates to the corresponding lactone or ester. This  
 CC polynucleotide sequence represents the 16S rDNA gene from Arthrobacter  
 CC sp. BP2 relating to the Baeyer-Villiger enzymes of the invention.

XX	New abyssomicin polycyclic macrolactone compounds, useful as antibiotics
PT	and antiprotozoal agents effective against multidresistant strains,
PT	prepared using bacteria of genus Verrucosisspora.
XX	
XX	Disclosure; SEQ ID NO 1; 47pp; German.
CC	
CC	This invention describes novel polycyclic macrolactones and their
CC	derivatives , prepared using bacteria of genus Verrucosisspora and
CC	designated abyssomicins. The polycyclic macrolactones have at least one
CC	oxa-bicyclo system as a partial structure and at least one Michael system
CC	as double bond system. The polycyclic macrolactones are prepared by
CC	culturing Verrucosisspora strain AB 18-032, recovering a culture
CC	supernatant from the culture, optionally preparing a culture filtrate and
CC	optionally isolating one or more polycyclic macrolactones from the
CC	supernatant and/or filtrate. Alternatively the microorganism is cultured
CC	followed by isolating one or more polycyclic macrolactones from the
CC	microorganism. The Verrucosisspora strain AB 18-032 was isolated from
CC	marine sediment collected at a depth of 1000m in Sagami bay in the
CC	Japanese Sea and is deposited as DSM No. 15899. The polycyclic
CC	macrolactones inhibit the biosynthesis of p-Aminobenzoic acid, (an
CC	essential component in the biosynthesis of folic acid) from chorismic
CC	acid, thus inhibiting folic acid biosynthesis. The vitamin folic acid is
CC	essential to the life of microorganisms, especially prokaryotes and
CC	protozoa. The polycyclic macrolactones do not inhibit the biosynthesis of
CC	folic acid in mammals (including humans), and thus have no adverse
CC	effects on mammalian cells. Three polycyclic macrolactones are
CC	specifically claimed, i.e. abyssomicin B, abyssomicin C and abyssomicin
CC	D. Abyssomicin C strongly inhibited growth of methicillin-resistant
CC	Staphylococcus aureus strain N315 and vancomycin-resistant Staphylococcus
CC	aureus strain Mu50. The products of the invention are useful as
CC	antibiotics (especially effective against Gram positive bacteria) and
CC	antiprotozoal agents, specifically effective against bacteria and
CC	protozoa resistant (especially multi-resistant) to conventional
CC	antibiotics. Typically polycyclic macrolactones are useful for combating
CC	tropical protozoal diseases (e.g. malaria, leishmaniasis, sleeping
CC	sickness and Chagas disease) and infections caused by resistant Gram
CC	positive bacteria such as methicillin- and vancomycin-resistant
CC	Staphylococcus aureus strains. Polycyclic macrolactones are also useful
CC	as disinfectants (especially in hospitals and other medical
CC	establishments) and as lead structures for the development of further
CC	active agents. This sequence represents the Verrucosisspora strain AB 18-
CC	032 16S rRNA DNA which is used to phylogenically classify the bacterial
XX	strain.

XX Novel Rhodococcus erythropolis M-13 strain capable of degrading aliphatic

PT hydrocarbon, useful for bioremediation of oil-polluted environment such

PT as river water, underground water, ocean, sea cost.

PS Claim 1; SEQ ID NO 1; 14pp; Japanese.

XX The invention relates to a novel Rhodococcus erythropolis M-13 strain

CC capable of degrading aliphatic hydrocarbons. The invention further

CC provides the 16S rRNA gene of the novel strain showing 98% or more

CC homology with a nucleotide sequence of a fully defined 1511 nucleotide

CC (AED11327) sequence given in specification. The novel strain is useful

CC for the bioremediation of an oil-polluted environment, such as river

CC water, underground water, ocean, sea cost, etc. The novel strain degrades

CC linear or branched aliphatic hydrocarbons efficiently. This

CC polynucleotide sequence represents the DNA of the novel Rhodococcus

CC erythropolis M-13 strain 16S rRNA gene of the invention.

PS

XX The invention relates to antibiotic MF-BA-1768alpal or MF-BA-1768-betal

CC or its pharmaceutically acceptable salt, having physicochemical

CC characteristics in the non-salt form as detailed in the specification.

CC The antibiotics are isolated from a novel strain of Microbispora

CC corallina designated NRRL 30420. Also included are producing the above

CC antibiotic (by cultivating Microbispora corallina NRRL 30420, or an

CC antibiotic MF- BA-1768alpal or MF-BA-1768betal -producing mutant,

CC variant or its recombinant form, in a culture medium containing

CC assimilable sources of carbon, nitrogen and inorganic salts under aerobic

CC fermentation conditions until the antibiotic is produced and then

CC recovering the antibiotic) and a composition comprising the above

CC antibiotic or its salt. The antibiotics are useful for treating a

CC bacterial infection caused by Staphylococcus (e.g. S.aureus , S.epidermis

CC , S.haemolyticus ), Enterococcus (e.g. E.faecalis , E.faecium ) ,

CC Streptococcus (e.g. S.pneumoniae , S.pyrogenes ) , Haemophilus (e.g.

CC H.influenzae ) or Escherichia (e.g. E.coli ) in a patient. The present

CC sequence is partial 16S rRNA sequence from M. corallina NRRL 30420, which

CC identifies the strain.

XX The present invention relates to genes and proteins associated with

CC vasculogenesis and angiogenesis related disorders. Specifically claimed

CC is an isolated nucleic acid encoding an angiogenesis affecting

CC polypeptide. The nucleic acid has the ability to stimulate or inhibit at  
 CC least one biological activity, e.g. vasculogenesis, angiogenesis,  
 CC vascular permeability, endothelial cell proliferation, endothelial cell  
 CC differentiation, endothelial cell migration, or endothelial cell  
 CC survival. Also claimed is an isolated siRNA molecule targeted to the  
 CC nucleic acid, and an antibody with specific reactivity to the nucleic  
 CC acid or peptide, which may further comprise a detectable fluorescent  
 CC label. Described is a method of treating an angiogenesis-related  
 CC condition, and a method of detecting an angiogenesis-related transcript  
 CC in a cell of a patient. The protein or nucleic acid are useful as  
 CC pharmaceuticals for affecting vasculogenesis or angiogenesis. The  
 CC angiogenesis-related disorder is cancer, retinopathy, macular  
 CC degeneration, corneal ulceration, stroke, ischemic heart disease,  
 CC infertility, ulcers, scleroderma, wound healing, ischemia, myocardial  
 CC infarction, myocardosis, angina pectoris, unstable angina, coronary  
 CC arteriosclerosis, arteriosclerosis obliterans, Berger's disease, arterial  
 CC embolism, arterial thrombosis, cerebrovascular occlusion, cerebral  
 CC infarction, cerebral thrombosis, cerebral embolism, rubeosis  
 CC proliferative vitreoretinopathy, chronic inflammation, inflammatory bowel  
 CC disease, psoriasis, sarcoidosis, or rheumatoid arthritis. The present  
 CC sequence is mouse gene N0C8009G23, identified as being expressed during  
 CC angiogenesis based on microarray data.

 XX  
 XX Claim 1; Page 128-131; 138pp; English.  
 XX  
 CC The invention relates to late gestation lung (LGL) 1 polypeptides and  
 CC encoding polynucleotides. The LGL1 polypeptides can be expressed by  
 CC standard recombinant methodology. The LGL1 polypeptides, polynucleotides  
 CC and modulators are useful for modulating lung disease, airway branching  
 CC and/or abnormal alveolarization. The lung disease is bronchopulmonary  
 CC dysplasia (BPD), emphysema, New BPD, chronic obstructive pulmonary  
 CC disease (COPD), congenital diaphragmatic hernia (CDH), chronic bronchial  
 CC infection, in a human with a deficiency of alpha-1-antitrypsin. The LGL1  
 CC polypeptide or polynucleotide is useful for the preparation of a  
 CC medicament for use in the treatment of lung disease or disorder. They are  
 CC useful in research, diagnostics and the preparation of therapeutics to  
 CC treat diseases. The present sequence represents a cDNA encoding a human  
 CC LGL1 polypeptide

 XX Claim 3; SEQ ID NO 1; 86pp; Japanese.  
 PS  
 XX The invention relates to a novel extracellular matrix protein. The

CC protein of the invention demonstrates cytostatic and neuroprotective  
CC activities and may be useful for tissue regeneration in regenerative  
CC medicine and artificial tissue formation in an external, for metastatic  
CC inhibition of a cancer cell and for diagnosing a disease accompanying  
CC morphogenesis or tissue malformation. Furthermore, the protein may be  
CC useful in the research of physiological functions such as human cell  
CC growth and differentiation, as well as for diagnosing, treating or  
CC relieving a brain disease caused by prion in individual and analyzing  
CC taste bud-specific protein function in the vertebrate. The current  
CC sequence is that of a murine secreted extracellular matrix cDNA of the  
CC invention.

 PS Example 2; SEQ ID NO 3363; 781pp + Sequence Listing; English.  
 XX  
 CC The invention relates to novel genes (AAL34669-AAL37666) and proteins  
 CC (ABB03087-ABB04109) associated with the musculoskeletal system useful for  
 CC preventing, treating or ameliorating medical conditions e.g. by protein  
 CC or gene therapy. The genes are isolated from a range of human tissues  
 CC disclosed in the specification. The nucleic acids, proteins, antibodies  
 CC and (ant)agonists are useful in the diagnosis, treatment and prevention  
 CC of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the  
 CC adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver,  
 CC lung, or urogenital; (b) immune disorders e.g. Addison's disease,  
 CC allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis,  
 CC diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid  
 CC arthritis and ulcerative colitis; (c) cardiovascular disorders such as  
 CC myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g.  
 CC cerebral anoxia and epilepsy; and (f) infectious diseases such as viral,  
 CC bacterial, fungal and parasitic infections. Note: The sequence data for  
 CC this patent did not form part of the printed specification, but was  
 CC obtained in electronic format directly from WIPO at  
 CC ftp.wipo.int/pub/published\_pct\_sequences

XX
XX New nucleic acid molecule, useful for preparing a medicament for
XX preventing, treating or ameliorating a medical condition e.g., cancer of
XX musculoskeletal tissues or osteoporosis.
XX
XX Disclosure; SEQ ID NO 3363; 289pp; English.
XX
XX The invention relates to a novel isolated musculoskeletal system-
XX associated nucleic acid molecule. The nucleic acid of the invention
XX demonstrates cytoskeletal and osteopathic activities and may be useful for
XX preparing a medicament for preventing, treating or ameliorating a medical
XX condition such as cancer of the musculoskeletal tissues or osteoporosis,
XX possibly via gene therapy or vaccine production. The current sequence is
XX that of the human musculoskeletal system-associated genomic DNA of the
XX invention. The current sequence is not shown within the specification per
XX se but is available on the USPTO web-site
XX http://seqdata.uspto.gov/sequence.html?DocID=20040009488.

PT New polynucleotides derived from human prostate, useful for modulating  
 XX immune response to prevent or treat cancer.  
 PS Claim 1; SEQ ID NO 422; 188pp; English.  
 XX  
 CC This invention relates to novel isolated polynucleotides of human origin,  
 CC particularly isolated from the human prostate. Specifically, it refers to  
 CC the diagnostics and therapeutics comprising these novel human  
 CC polynucleotides, and includes the derived probes, antisense  
 CC oligonucleotides and antibodies thereof. The identification of these  
 CC human prostate genes that can inhibit tumour growth is useful for  
 CC understanding the progression and nature of complex diseases such as  
 CC cancer, and hence they are important in the drug discovery process. The  
 CC present invention describes these polynucleotides and encoded  
 CC polypeptides as exhibiting cytostatic activity, and through gene therapy  
 CC and/or vaccines they can be used to modulate the immune response for the  
 CC prevention or treatment of cancers, particularly of the prostate, but  
 CC also for breast, lung and colon cancer. This polynucleotide sequence is a  
 CC human cDNA sequence useful for the treatment of cancer, used in an  
 CC exemplification of the invention. NOTE: These sequences are not given in  
 CC the specification but are provided on the WIPO website.

 XX New genes and gene products isolated from human prostate, useful for  
 PT treating or diagnosing tumor or cancer (e.g. prostate cancer or breast  
 PT cancer), or as vaccines for treating or preventing these diseases.  
 XX  
 PS Claim 1; SEQ ID NO 423; 186pp + Sequence Listing; English.  
 XX  
 XX The invention relates to an isolated polynucleotide comprising any of

CC 1477 sequences or its fragment, degenerate variant, antisense or  
CC complement. The polynucleotides and gene products are useful for treating  
CC or diagnosing tumour or cancer (e.g. prostate cancer, breast cancer, lung  
CC cancer or medullary carcinoma) in a subject (e.g. cattle, dogs, cats,  
CC rabbits, horse or human). The polynucleotides and polypeptides are also  
CC useful as vaccines for treating or preventing these diseases. The  
CC polynucleotides are useful for gene therapy. The present sequence is that  
CC of one of a group of polynucleotides (ABQ88745-ABQ90015) disclosed  
CC electronically as sequences of the invention. However only 1271  
CC polynucleotide sequences are given, whereas 1477 polynucleotides and 91  
CC proteins are claimed. Note: The sequence data for this patent did not  
CC form part of the printed specification, but was obtained in electronic  
CC format directly from WIPO at ftp.wipo.int/pub/published\_pct\_sequence

XX New human genome-derived single exon nucleic acid probes useful for human  
PT gene expression analysis, for identifying or characterizing alternative  
PT splicing events, for assessing genomic alterations or as tools for  
PT surveying tissues.  
XX  
XX Claim 15; SEQ ID NO 13162; 80pp; English.  
PS  
XX The invention relates to a nucleic acid probe for measuring human gene  
CC expression, comprising any of the 27,400 fully defined nucleotide  
CC sequences in the specification, or their complements or fragments, and  
CC encoding at least 8 amino acids of any of the 6888 amino acid sequences  
CC fully defined in the specification. The probe is a single exon probe that  
CC hybridises under high stringency conditions to a nucleic acid molecule  
CC expressed in human cells or tissues. Also included are a spatially-  
CC addressable set of single exon nucleic acid probes for measuring human  
CC gene expression (comprising a plurality of single exon nucleic acid  
CC probes cited above, where each of the plurality of probes is separately

CC and addressably isolatable or amplifiable from the plurality), a single  
CC exon microarray for measuring human gene expression, a method of  
CC measuring human gene expression, a vector comprising the single exon  
CC probe cited above, an ORF-encoded peptide comprising at least 8  
CC contiguous amino acids of any of the above-mentioned amino acid  
CC sequences (optionally with conservative amino acid substitutions), an  
CC isolated antibody that binds specifically to a peptide cited above,  
CC methods of selling and/or licensing single exon probes or microarrays to  
CC a customer desiring to measure gene expression, a method of providing  
CC human gene expression data by subscription, and a computer-readable  
CC storage medium which contains a database having a plurality of records  
CC (each record including data on the expression of a single exon probe  
CC cited above. The probe, methods and apparatus are useful in gene  
CC expression analysis. The probes may be used as tools for surveying  
CC tissues to detect the presence of expressed messages that contain their  
CC specific exon, or in constructing genome-derived single exon microarrays.  
CC In addition, the probes are used in identifying and characterising  
CC alternative splicing events, in detecting and characterising gross  
CC alterations in the genomic locus that includes their exon, in assessing  
CC smaller genomic alterations, in priming the synthesis of nucleic acids,  
CC or in expressing the ORF-encoded peptide. The present sequence is a human  
CC single exon probe of the invention. Note: The sequence data for this  
CC patent did not form part of the printed specification, but was obtained  
CC in electronic format directly from USPTO at  
CC seqdata.uspto.gov/sequence.html?DocID=20030194704

An isolated polynucleotide for treating diseases associated with its
encoded polypeptide such as cancer and multiple sclerosis.
Claim 1; SEQ ID NO 328; 509pp; English.
The present invention provides the protein and coding sequences of 444
novel human proteins. These were isolated from expressed sequences tags
(ESTs). They can be used to stimulate cell growth, to regulate
haematopoiesis e.g. to treat aplastic anaemia, to help tissue regrowth
e.g. in burn treatment, to regulate the immune system e.g. to treat
multiple sclerosis, to regulate activin or inhibin e.g. to treat
infertility, to regulate haemostasis or thrombolysis e.g. to treat stroke
and cancer, to screen for drugs, to treat inflammatory conditions e.g.
rheumatoid arthritis, and to treat nervous system disorders e.g.
Parkinson's disease. The present sequence is a coding sequence of the
invention

PT New nucleic acid useful for the diagnosis and treatment of thyroid
PT disorders, e.g. tumors.
XX
PS Claim 2; Page 52-54; 59pp; German.
XX
CC This invention describes a novel nucleic acid (N1) encoding a polypeptide
CC which comprises a KRAB-domain and/or at least one zinc finger motif. The
CC products of the invention have cytostatic and antithyroid activity and
```

CC can be used in gene therapy. Nucleic acids, polypeptides, and antibodies  
 CC of the invention may be used in the diagnosis and/or the therapy of the  
 CC malfunction of the thyroid and/or hyperplasias of the thyroid and/or  
 CC thyroid tumors. They may also be used in the production of medicaments.  
 CC (NI) can also be used to diagnose thyroid tumors which are located on  
 CC chromosome 19 at band 19q13. This sequence encodes the thyroid  
 CC malfunction-associated protein, RITA which is described in the method of  
 CC the invention

 PT diagnosis and for gene therapy of conditions such as cancer and  
 PT thalassemia.  
 XX  
 XX Claim 1; Page 271; 299pp; English.

XX The present sequence for human diagnostic and therapeutic (dithp) cDNA  
 CC sequence #33 is 1 of 71 (AAS03012-AAS03082) novel sequences described in  
 CC the invention. The present sequence (Incyte ID No: 9027913dec) encodes a  
 CC transcription factor molecule. The dithp polynucleotides may be used to  
 CC diagnose a condition disease or disorder associated with human molecules.  
 CC They can be used to identify the presence of similar nucleic acids. Dithp  
 CC polynucleotides may be used to generate hybridisation probes for use in  
 CC chromosomal mapping. Polypeptides (DITHP) encoded by dithp are used to  
 CC screen for molecules which bind to them and modulate their activity.  
 CC Dithp polynucleotides can be used for gene therapy of disorders such as  
 CC severe combined immunodeficiency syndrome (SCID), cystic fibrosis,  
 CC thalassemia, haemophilia resulting from Factor VIII or IX deficiencies,  
 CC cardiovascular disorders e.g familial hypercholesterolaemia (FH), cell  
 CC proliferative disorders e.g. cancers, neurodegenerative disorders,  
 CC autoimmune/inflammatory disorders, infectious disorders and developmental  
 CC disorders. The antibodies can be used to analyse protein expression  
 CC levels

PT 830 Primers useful for synthesizing full length cDNA clones and their use  
PT in genetic manipulation.  
PS  
XX Claim 8; SEQ ID NO 3469; 1380pp + Sequence Listing; English.  
XX  
CC The invention relates to primers for synthesizing full length cDNA  
CC clones. 830 cDNA molecules encoding a human protein have been isolated  
CC and nucleotide sequences of 5' - and 3' -ends of the cDNA molecules have  
CC been determined. Primers for synthesizing the full length cDNA are useful  
CC for clarifying the function of the protein encoded by the cDNA. The full  
CC length clones were obtained by construction of full length enriched cDNA  
CC libraries that were synthesised by the oligo-capping method. The primers  
CC enable the production of the full length cDNA easily without any special  
CC methods. The present sequence is a full length human cDNA of the  
CC invention. Note: The sequence data for this patent did not form part of  
CC the printed specification, but was obtained in CD-ROM format directly  
CC from EPO

XX Example 1; SEQ ID NO 3469; 1340pp; English.  
PS  
XX This invention relates to a novel primers useful for synthesizing full  
XX length cDNA molecules that encode human proteins. Specifically, it refers  
CC to secretory or membrane proteins that are potential therapeutic agents/  
CC target molecules in the field of medicine, and in particular genes  
CC encoding proteins that are associated with signal transduction,  
CC

CC glycoproteins and transcription. The present invention describes a method  
CC for efficiently cloning a full length human cDNA from both the 5' and 3',  
CC ends using the oligo-capping method. This polynucleotide sequence is a  
CC full length human cDNA clone of the invention.

XX genes from Drosophila and for elucidating cell signaling and cell-cell  
XX interactions.  
XX PT  
XX Claim 1; SEQ ID NO 15947; 21pp + Sequence Listing; English.  
XX PS  
XX The invention relates to an isolated nucleic acid detection reagent  
XX capable of detecting 1000 or more genes from Drosophila. The invention is  
XX useful in developmental biology and in elucidating cell signalling and  
XX cell-cell interactions in higher eukaryotes for the development of  
XX insecticides, therapeutics and pharmaceutical drugs. The invention  
XX discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA  
XX sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-  
XX ABB72072). The sequence data for this patent did not form part of the  
XX printed specification, but was obtained in electronic format directly  
XX from WIPO at ftp.wipo.int/pub/published\_pct\_sequences

 XX  
 XX Claim 1; SEQ ID NO 123; 980pp; English.  
 XX  
 CC The invention relates to isolated nucleic acid molecules and their  
 CC encoded secreted proteins. The nucleic acids and proteins are used to  
 CC prevent, treat or ameliorate a medical condition in e.g. humans, mice,  
 CC rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used  
 CC in diagnosing a pathological condition or susceptibility to a  
 CC pathological condition. Antibodies to the proteins can also be used in  
 CC alleviating symptoms associated with the disorders and in diagnostic  
 CC immunoassays e.g. radioimmunoassays or enzyme linked immunosorbent assays  
 CC (ELISA). Disorders which are diagnosed or treated include autoimmune  
 CC diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g.  
 CC neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac  
 CC arrest, cerebrovascular disorders e.g. cerebral ischaemia, angiogenesis,  
 CC nervous system disorders e.g. Alzheimer's disease, infections caused by  
 CC bacteria, viruses and fungi and ocular disorders e.g. corneal infection,  
 CC and many other disorders listed in the specification. The polypeptides  
 CC can also be used to aid wound healing and epithelial cell proliferation,  
 CC to prevent skin aging due to sunburn, to maintain organs before  
 CC transplantation, for supporting cell culture of primary tissues, to  
 CC regenerate tissues and in chemotaxis. The polypeptides can also be used  
 CC as a food additive or preservative to increase or decrease storage  
 CC capabilities, fat content, lipid, protein, carbohydrate, vitamins,  
 CC minerals, cofactors and other nutritional components. The present  
 CC sequence encodes a novel secreted protein of the invention. Note: The  
 CC sequence data for this patent did not form part of the printed

XX
XX Nucleic acid ligands used in cancer screening, AIDS monitoring etc. -
XX bind to peripheral blood mononuclear cells, fibrin clots or carotid
XX arteries.
XX
XX Claim 23; Page 58; 138pp; English.
XX
XX AAT70705-T70803 represent the random regions from a degenerate ssDNA
XX library based on the sequence represented by AAT72819. These sequences
XX are all ligands specific for fibrin clots identified using the method of
XX the invention. The method of the invention is for identifying nucleic
XX acid (NA) ligands and NA ligand sequences to a tissue target selected
XX from peripheral blood mononuclear cells (PBMC's) (such as the ligands
XX represented by AAT70584-T70616), fibrin clots (such as the ligands
XX represented by AAT70617-T70704), and carotid arteries (such as these
XX ligands). The method comprises preparing a candidate mixture of NA
XX sequences, and contacting these with the tissue, whereby NAs having an
XX increased affinity to the tissue relative to the candidate mixture may be
XX partitioned from the remainder of the candidate mixture. The increased
XX affinity NAs are then partitioned from the remainder of the candidate
XX mixture, and are amplified to yield a mixture of NAs enriched for NA
XX sequences with a relatively higher affinity and specificity for binding
XX to the tissue, whereby NA ligands of the tissue may be identified. The
XX method represents a tissue SELEX (systematic evolution of ligands by
XX exponential enrichment) method. The NA ligands and epitopes and
XX macromolecules identified using the ligands can be used in diagnostic and
XX therapeutic applications. In particular, they can be used for e.g. cancer
XX screening, AIDS monitoring, detection and localisation of thrombi or
XX atherosclerosis diagnosis and therapy

 XX Identifying nucleic acid ligands to blood vessels.  
 XX Example 3; Page 69; 210pp; English.  
 XX The present invention describes a new method of identifying nucleic acid  
 CC ligands to blood vessels. The method comprises contacting and  
 CC partitioning nucleic acid sequences having increased affinity to the  
 CC blood vessels and amplifying enriched sequences. The nucleic acid ligands  
 CC are capable of binding specifically to tissues which are macromolecules  
 CC in a heterogeneous environment, such as whole cells or substructures,  
 CC aggregates of cells, collections of cells, or aggregates of  
 CC macromolecules. The ligands can be used to identify and purify epitopes  
 CC and macromolecules. The products can be used as diagnostic and  
 CC therapeutic agents. AAX85058 to AAX85497 represent oligonucleotides used  
 CC in the exemplification of the present invention

 PT cell walls.  
 XX  
 XX Claim 2; SEQ ID NO 63; 90pp; English.  
 PS  
 XX The present invention describes an isolated nucleic acid molecule (I)  
 CC comprising a polynucleotide that is capable of conferring vascular-  
 CC preferred polynucleotide transcription. Also described: (1) an isolated  
 CC polynucleotide having a sequence selected from: (a) sequences  
 CC complementary to any of the sequences of SEQ ID NO:1 to 85 (S1, ADP20312  
 CC to ADP20396); (b) sequences that are reverse complements of any one of  
 CC (S1); and (c) sequences comprising at least 20 contiguous bases, which  
 CC hybridises to any one of (a) or (b); (2) a plant cell (II) comprising at  
 CC least one polynucleotide sequence that has (S1) and a desired gene, where  
 CC the polynucleotide and the desired gene are operably linked; (3) a plant  
 CC (III) comprising (II); (4) regulating the lignin content of a plant,  
 CC which involves cultivating (III); (5) regulating cell wall development in  
 CC a plant, which involves cultivating (III); (6) a transgenic plant  
 CC comprising a polynucleotide sequence chosen from (S1) and its functional  
 CC variants; and (7) obtaining (MI) wood, which involves introducing into a  
 CC plant cell of a woody plant a DNA construct comprising a promoter having  
 CC (S1) or its functional variants and a desired nucleic acid, where a  
 CC promoter regulates the expression of the desired nucleic acid, culturing  
 CC the transformed plant cell under condition that promote growth of a plant  
 CC and obtaining wood from the plant. (I) is useful for conferring vascular-  
 CC preferred gene expression, for regulating biosynthesis of lignin, for  
 CC controlling the lignin content plant cell walls, cellulose content, size  
 CC or cell wall development of a plant, cellulose. The present sequence  
 CC represents a Pinus radiata regulatory sequence, which is a vascular-  
 CC preferred promoter from the present invention.

XX		
CC	The invention relates to an isolated nucleic acid comprising any one of	
CC	the 6213 antisense sequences given in the specification where expression	
CC	of the nucleic acid inhibits proliferation of a cell. Also included are:	
CC	(1) a vector comprising a promoter operably linked to the nucleic acid	
CC	encoding a polypeptide whose expression is inhibited by the antisense	
CC	nucleic acid; (2) a host cell containing the vector; (3) an isolated	
CC	polypeptide or its fragment whose expression is inhibited by the	
CC	antisense nucleic acid; (4) an antibody capable of specifically binding	
CC	the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular	
CC	proliferation or the activity of a gene in an operon required for	
CC	proliferation; (7) identifying a compound that influences the activity of	
CC	the gene product or that has an activity against a biological pathway	
CC	required for proliferation, or that inhibits cellular proliferation; (8)	
CC	identifying a gene required for cellular proliferation or the biological	
CC	pathway in which a proliferation-required gene or its gene product lies	
CC	or a gene on which the test compound that inhibits proliferation of an	
CC	organism acts; (9) manufacturing an antibiotic; (10) profiling a	
CC	compound's activity; (11) a culture comprising strains in which the gene	
CC	product is overexpressed or underexpressed; (12) determining the extent	
CC	to which each of the strains is present in a culture or collection of	
CC	strains; or (13) identifying the target of a compound that inhibits the	
CC	proliferation of an organism. The antisense nucleic acids are useful for	
CC	identifying proteins or screening for homologous nucleic acids required	
CC	for cellular proliferation to isolate candidate molecules for rational	
CC	drug discovery programs, or for screening homologous nucleic acids	
CC	required for proliferation in cells other than S. aureus, S. typhimurium,	
CC	K. pneumoniae or P. aeruginosa. The present sequence is one of the target	
CC	prokaryotic essential genes. Note: The sequence data for this patent did	
CC	not form part of the printed specification, but was obtained in	
CC	electronic format directly from WIPO at

 DR Improving plant productivity comprises introducing into the plant or  
 PT propagation material an endophytic actinomycete that facilitates  
 PT induction of at least one characteristic related to improved  
 PT productivity.  
 XX Claim 1; SEQ ID NO 1; 235pp; English.  
 PS This invention relates to a novel method for improving plant  
 XX productivity. Specifically, it refers to introducing into the plant or  
 CC propagation material an endophytic actinomycetes or variant thereof,  
 CC where the actinomycetes facilitate induction of a characteristic related  
 CC to improved productivity. The present invention further describes  
 CC metabolites of the actinomycetes microorganism such as auxin, gibberellin  
 CC or cytokinin that are able to induce disease resistance in plants i.e.  
 CC provide disease bio-control capabilities against pathogen infection.  
 CC Accordingly, the method facilitates the improvement of cereal crop  
 CC productivity including increasing germination by up-regulating plant  
 CC growth promoting activities, as well as improving plant vigor or flower  
 CC and fruit yield. Furthermore, the new actinomycete or metabolite is  
 CC useful in the manufacture of a medicament for the therapeutic and/or  
 CC prophylactic treatment of a mammalian or non-mammalian subject i.e.  
 CC plant. As such, this method provides plant protectants and plant growth  
 CC stimulants that exhibit antibacterial, antimicrobial, fungicide,  
 CC insecticide and nematocide activities. This polynucleotide is the DNA  
 CC sequence of an actinomycetes 16s ribosomal RNA sequence of the invention.

 DR New constitutive promoter sequences from maize, useful in genetic  
 PT manipulation of plants.  
 XX Claim 1; Page 39; 53pp; English.  
 PS This sequence represents a maize histone H2B constitutive promoter. Maize  
 XX H2B histones are constitutively expressed at a high level in meristematic  
 CC tissue. This promoter was isolated and amplified from a maize seedling  
 CC genomic library using an APL primer (AAZ11775) and a gene-specific  
 CC primer, histone H2B gsp-1 (AAZ11776). The DNA from this first round of  
 CC PCR was diluted and used as a template for a second round of PCR, this  
 CC time using an AP2 primer (AAZ06802) and a second gene-specific primer,  
 CC histone H2B gsp-2 (AAZ06803). The amplified DNA was sequenced for  
 CC verification, cloned into the TA vector pCR2.1, miniprep and subjected  
 CC to a third round of PCR using the AP2 primer and a third gene-specific  
 CC primer, histone H2B gsp-3 (AAZ06810). This sequence, and other  
 CC constitutive plant promoters (AAZ11766-Z11774), are capable of initiating  
 CC constitutive expression in plant cells and have potential for use in  
 CC vectors used to introduce and express heterologous DNA sequences in  
 CC plants. Such a vector would comprise the heterologous DNA sequence  
 CC operably linked to the promoter. The vector could then be used to  
 CC transform a plant cell. A stably transformed plant could then be  
 CC regenerated from the transformed plant cell. The heterologous sequences  
 CC that could be linked to these constitutive promoters might include a  
 CC pathogen-resistance gene, enabling pathogen-resistance proteins to be  
 CC continuously expressed throughout the plant's tissues. Alternatively,  
 CC antisense DNA could be used to inhibit the expression of a native gene to  
 CC produce a desired phenotype. The antisense RNA transcript would bind to  
 CC native mRNA and interfere with translation

XX  
XX New stress-responsive nucleic acid, useful for altering the  
PT responsiveness of a plant, e.g. cereal, to an abiotic stress such as cold  
PT stress, salt stress or osmotic stress.  
XX  
XX Claim 48; SEQ ID NO 14679; 89pp; English.  
XX  
XX The invention relates to novel abiotic stress responsive polynucleotides  
CC and polypeptides. Also disclosed are vectors, expression cassettes, host  
CC cells, and plants containing such polynucleotides. Also disclosed are  
CC methods for using the polynucleotides and polypeptides to alter the  
CC responsiveness of a plant to abiotic stress. The invention is useful in  
CC agriculture. The nucleic acid is useful for determining whether a test  
CC plant has been exposed to an abiotic stress condition. It is also useful  
CC for selecting an agent that alters abiotic stress regulated  
CC polynucleotide expression in a plant cell, and to identify a homolog or  
CC ortholog to an abiotic stress responsive polynucleotide. The nucleic acid  
CC molecule and the polypeptide encoded by it are useful in altering the  
CC responsiveness of a plant to an abiotic stress, such as cold stress, salt  
CC stress, osmotic stress or any of their combinations. The present sequence  
CC is used in the exemplification of the invention

PT New isolated nucleic acid detection reagent for detecting 1000 or more

PT genes from *Drosophila* and for elucidating cell signaling and cell-cell

PT interactions.

XX

XX Claim 1; SEQ ID NO 38426; 2lpp + Sequence Listing; English.

PS

CC The invention relates to an isolated nucleic acid detection reagent

CC capable of detecting 1000 or more genes from *Drosophila*. The invention is

CC useful in developmental biology and in elucidating cell signalling and

CC cell-cell interactions in higher eukaryotes for the development of

CC insecticides, therapeutics and pharmaceutical drugs. The invention

CC discloses genomic DNA sequences (AB116176-AB130511), expressed DNA

CC sequences (AB101840-AB116175) and the encoded proteins (ABB57737-

CC ABB72072). The sequence data for this patent did not form part of the

CC printed specification, but was obtained in electronic format directly

CC from WIPO at ftp.wipo.int/pub/published\_pct\_sequences

PT as potential insecticides, to determine the biological activity of the

PT protein and for identifying compounds that modulate receptor activity.

XX

XX Claim 4; SEQ ID NO 106; 130pp; English.

XX

CC The invention describes an isolated protein (I) consisting or comprising

CC an amino acid sequence selected from fully defined 66 G-protein coupled

CC receptor amino acid sequences (S1), as given in the specification, an

CC allelic variant of (S1), an orthologue of (S1) or fragment of (S1). (I)

CC is useful for identifying an agent that binds to (I) which comprises

CC contacting the protein with an agent and assaying the contacted mixture

CC to determine whether a complex is formed with the agent bound to the

CC protein. (I) is useful for identifying modulators as potential

CC insecticides, to determine the biological activity of the protein (a

CC panel of multiple proteins for high-throughput screening), as targets for

CC identifying agents for use in human drugs and for identifying compounds

CC that modulate receptor activity. An antibody (II) that selectively binds

CC to (I) is useful for assessing normal and aberrant subcellular

CC localisation of cells and monitoring a treatment modality. A nucleic acid

CC (III) encoding (I) is useful for drug/insecticide screening to identify

CC compounds that modulate G-protein coupled receptor (GPCR) nucleic acid

CC expression, diagnostic assays for qualitative changes in GPCR nucleic

CC acid that lead to insecticidal activity/tolerance, to detect mutations in

CC GPCR genes and gene expression products such as mRNA, and as

CC hybridisation probes for determining the presence, level, form and  
 CC distribution of nucleic acid expression. A host cell comprising a vector  
 CC containing (III) is useful for conducting cell-based assays involving the  
 CC GPCR protein or its fragments, and identifying GPCR protein mutants. This  
 CC sequence encodes a fruit fly G-protein coupled receptor (GPCR).

 XX Rosen CA, Barash SC, Ruben SM;  
 XX WPI; 2001-483426/52.  
 XX  
 XX Nucleic acids encoding human immune/hematopoietic antigen polypeptides,  
 PT useful for preventing, diagnosing and/or treating cancers and metastasis.  
 XX  
 XX Disclosure; SEQ ID NO 19750; 3071pp + Sequence Listing; English.  
 XX  
 XX AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)  
 CC amino acid sequences given in AAK82170 to AAK91921. (I) have cytostatic  
 CC activity, and can be used in gene therapy and vaccine production. (I)  
 CC proteins and polynucleotides may be used in the prevention, diagnosis and  
 CC treatment of diseases associated with inappropriate (I) expression. For  
 CC example, they may be used to treat disorders associated with decreased  
 CC expression by rectifying mutations or deletions in a patient's genome  
 CC that affect the activity of (I) by expressing inactive proteins or to  
 CC supplement the patient's own production of (I). Additionally, (I)  
 CC polynucleotides may be used to produce the secreted (I), by inserting the  
 CC nucleic acids into a host cell and culturing the cell to express the  
 CC protein. (I) proteins and polynucleotides may be used to prevent,  
 CC diagnose and treat immune/haematopoietic-related diseases, especially  
 CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703  
 CC to AAK87694 represent human immune/haematopoietic antigen genomic  
 CC sequences from the present invention. AAK54942 to AAK54950 and AAK82169  
 CC represent sequences used in the exemplification of the present invention

XX (HUMA-) HUMAN GENOME SCI INC.
XX
XX Rosen CA, Barash SC, Ruben SM;
PI WPI; 2001-451937/48.
XX
XX Isolated polypeptide for treating, preventing and/ or prognosing
PT disorders related to the musculoskeletal system including musculoskeletal
PT cancers and also for testing and detection e.g. diagnosis.
XX
XX Example 2; SEQ ID NO 2799; 78lpp + Sequence Listing; English.
XX
XX The invention relates to novel genes (AAL34669-AAL37666) and proteins
CC (ABB03087-ABB04109) associated with the musculoskeletal system useful for
CC preventing, treating or ameliorating medical conditions e.g. by protein
CC or gene therapy. The genes are isolated from a range of human tissues
CC disclosed in the specification. The nucleic acids, proteins, antibodies
CC and (ant)agonists are useful in the diagnosis, treatment and prevention
CC of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the
CC adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver,
CC lung, or urogenital; (b) immune disorders e.g. Addison's disease,
CC allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis,
CC diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid
CC arthritis and ulcerative colitis; (c) cardiovascular disorders such as
CC myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g.
CC cerebral anoxia and epilepsy; and (f) infectious diseases such as viral,
CC bacterial, fungal and parasitic infections. Note: The sequence data for
CC this patent did not form part of the printed specification, but was
CC obtained in electronic format directly from WIPO at
XX ftp.wipo.int/pub/published_pct_sequences

XX (HUMA-) HUMAN GENOME SCI INC.  
 PA Rosen CA, Ruben SM, Barash SC;  
 PI WPI; 2004-090458/09.  
 XX New nucleic acid molecule, useful for preparing a medicament for

PT preventing, treating or ameliorating a medical condition e.g., cancer of  
PT musculoskeletal tissues or osteoporosis.

XX Disclosure; SEQ ID NO 2799; 289pp; English.

XX The invention relates to a novel isolated musculoskeletal system-  
CC associated nucleic acid molecule. The nucleic acid of the invention  
CC demonstrates cytostatic and osteopathic activities and may be useful for  
CC preparing a medicament for preventing, treating or ameliorating a medical  
CC condition such as cancer of the musculoskeletal tissues or osteoporosis,  
CC possibly via gene therapy or vaccine production. The current sequence is  
CC that of the human musculoskeletal system-associated genomic DNA of the  
CC invention. The current sequence is not shown within the specification per  
CC se but is available on the USPTO web-site  
CC <http://seqdata.uspto.gov/sequence.html?DocID=20040009488>.

 (HUMA-) HUMAN GENOME SCI INC.  
 PA Rosen CA, Barash SC, Ruben SM;  
 XX MPI; 2001-451930/48.  
 DR New cardiovascular system related polynucleotides and polypeptides,  
 XX useful for diagnosing, treating and/or preventing disorders of the  
 PT cardiovascular system.  
 XX  
 XX Claim 1; SEQ ID NO 2314; 674pp; English.  
 PS  
 XX Sequences AAS35741-AAS36942 represent genomic DNA molecules, which encode  
 CC the cardiovascular system antigen and their associated polynucleotides are  
 CC Cardiovascular system antigens and their associated polynucleotides are  
 CC useful in the diagnosis, treatment and prevention of various types of  
 CC disorders in e.g. humans, mice, rabbits, goats, horses, cats, dogs,  
 CC chickens or sheep. A pathological condition can be determined by  
 CC detecting the presence or absence of a mutation in a cardiovascular  
 CC system antigen polynucleotide. The treatable disorders include autoimmune  
 CC diseases such as rheumatoid arthritis, hyperproliferative disorders such  
 CC as neoplasms of the breast or liver, cardiovascular disorders such as  
 CC cardiac arrest, cerebrovascular disorders such as cerebral ischaemia,  
 CC nervous system disorders such as Alzheimer's disease, infections caused  
 CC by bacteria, viruses and fungi, ocular disorders such as corneal  
 CC infection, endocrine disorders such as premature labour and infertility,  
 CC gastrointestinal disorders such as Crohn's disease, renal disorders such  
 CC as glomerulonephritis and respiratory disorders such as asthma and  
 CC pleurisy. The polypeptides can also be used to aid wound healing, to  
 CC prevent skin aging due to sunburn, to maintain organs before  
 CC transplantation, to regenerate tissues and in chemotaxis. Note: The  
 CC sequence data for this patent did not form part of the printed  
 CC specification, but was obtained in electronic format directly from WIPO  
 CC at ftp.wipo.int/pub/published\_pct\_sequences

PA (HUMA-) HUMAN GENOME SCI INC.  
XX  
XX Rosen CA, Ruben SM, Barash SC;  
XX  
XX WPI; 2003-743766/70.  
XX  
XX New cardiovascular system related polynucleotides and polypeptides,  
PT useful for preventing, treating, or ameliorating a medical condition,  
PT such as cancer of cardiovascular tissues and cancer metastases.  
XX  
XX Claim 1; SEQ ID NO 2314; 262pp; English.  
XX  
XX The invention relates to human cardiovascular system related polypeptides  
CC and the polynucleotides encoding them. The polypeptides, polynucleotides  
CC and antibodies to the polypeptides are useful for diagnosing a  
CC pathological condition or a susceptibility to a pathological condition,  
CC for preventing, treating, or ameliorating a medical condition, such as  
CC cancer of cardiovascular system tissues, proliferative disorders, foetal  
CC and developmental abnormalities, haematopoietic disorders, diseases of  
CC the immune system, AIDS, autoimmune diseases (e.g., rheumatoid  
CC arthritis), inflammation, allergies, neurological disorders (e.g.,  
CC Alzheimer's disease, Parkinson's disease), cognitive disorders,  
CC schizophrenia, asthma, skin disorders (e.g., psoriasis), sepsis,  
CC diabetes, atherosclerosis, cardiovascular disorders, angiogenic  
CC disorders, kidney disorders, gastrointestinal disorders, pregnancy-  
CC related disorders, endocrine disorders and infections. The nucleic acids  
CC are also useful for chromosome identification, radiation hybrid mapping  
CC or long-range restriction mapping. The polypeptides and polynucleotides  
CC may also be used as food additives or preservatives to increase or  
CC decrease storage capabilities, fat content or other nutritional  
CC components. This sequence represents human cardiovascular system related  
CC genomic DNA of the invention.

/notes="Site 1: SalI; Site 2: BamHI; cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues. 1st strand cDNA was primed with a primer [5'  
GAGAGAGAGATCCAGAGCTCTTTTCTTTTCTTTT 3'], cDNA was prepared by using trehalose thermo-activated reverse transcriptase and subsequently enriched for full-length by cap-trapper. cDNA went through one round of normalization to Rot = 20.0 and subtraction to Rot = 459.0. Second strand cDNA was prepared with the primer adapter of sequence [5' GAGAGAGATTCGAGTTAAATTAATCCCTCCCTCC sequence [5' GAGAGAGATTCGAGTTAAATTAATCCCTCCCTCC 3']. cDNA was cleaved with XhoI and BamHI. Vector: a modified pBluescript KS(+) after bulk excision from Lambda FLC I."

and Wing, R.  
Sequencing of the maize genome

[illegible]

was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adapted DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWP42 (G14732114[gb|AF129072.1]), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adapted mouse DNA was annealed to adapted vector DNA, and transformed into chemically-competent *E. coli* XL10-Gold (Stratagene) cells and selected for ampicillin resistance."
